

COVID-19 Onscreen Indicators for Meditech

We will soon display COVID-19 PUI and testing results from an indicator display on the Order Management, Nursing documentation, and C-Tracker screens.

The indicator will include the **date of the most recent result** and is triggered by the entry of information in the LAB module.

Based on current guidelines and recommendations, a previous positive result will not revert to negative (CV19 NEG) until the system recognizes two negative test results that are >24 hrs apart.

Order screen

PUI- Patient under investigation

CV19 PUI 4/03

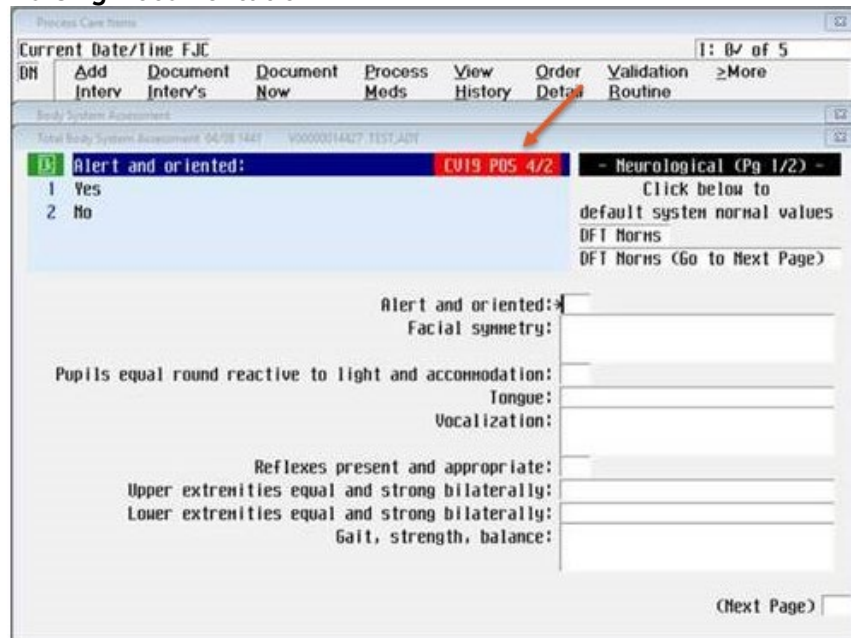

POS- Positive result from Lab

CV19 POS 4/03

NEG- Neg result from Lab **or** two Negative results >24 hrs apart

CV19 NEG 4/03
