

NEW Patient Care Intervention

Documentation Update

- HCA has developed a Proning Therapy screen in MEDITECH that will capture initiation, monitoring, and discontinuation of therapeutic proning events.
- This intervention is available for ICU, Med/Surg, ED, and RT
- Proning episode times are automatically calculated throughout the monitor and discontinue phases.
- The start date/time CANNOT be edited once the start phase is filed. If an error is made, the documentation must be undone and re-documented.
