Navigating Crisis Management (COVID-19)

With Vault Solo

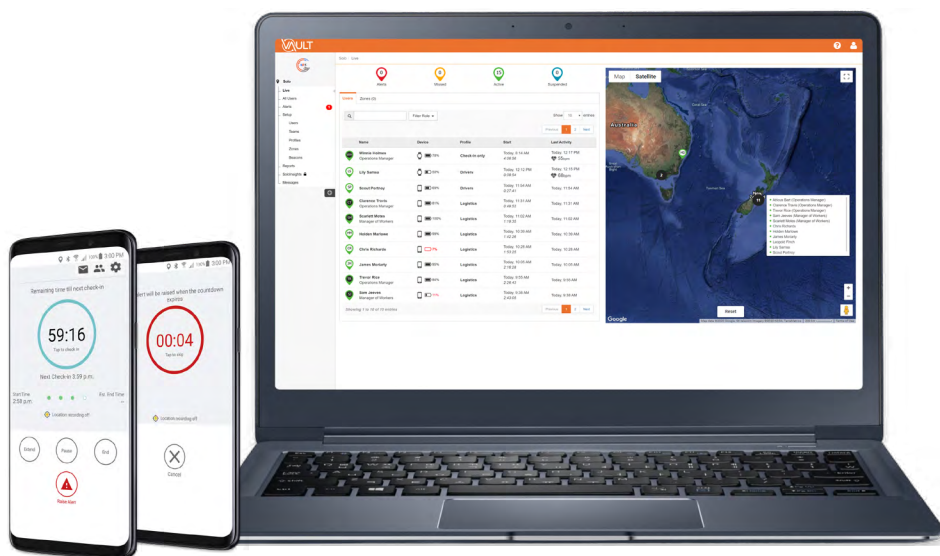

VAULT

Vault Solo

Vault Solo (Solo) is a SaaS based solution that utilises web-based dashboards, mobile phones and wearables to allow workforces to continue to operate whether they are onsite, deployed locally, overseas, travelling, working remotely or are isolated.

Through Solo, businesses are able to locate, connect and protect their workers, minimising the loss of productivity and disruption in times of a crisis or implementing a business decision that calls for greater remote working.

The product is developed and guided by ISO 22320:2018 - Emergency Management, and enables businesses to comply with the principles contained within the standard.

Target Group

- Solo is totally scalable and able to be deployed securely and globally. Hosted on the Microsoft Azure platform.

- Scalable from SME businesses through to multinational organisations.

- Deployable globally for use in countries, organisations and multinationals that are either high risk or have been affected by COVID-19.
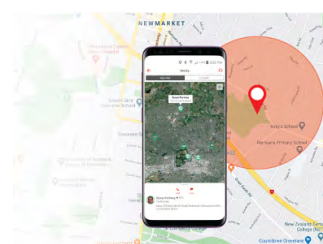

Key Deliverables

- Allows and assists businesses to effectively locate, protect and connect their workforces in times of crisis and enact remote and isolated work environments when and if required.

- Provides an essential mechanism to help sustain and operate a business through a crisis such as COVID-19.

- Provides real time visualisation and insights into the wellness, status and deployment of their workforce.

- Provides accurate auditable detail of the movement of people and their areas they have entered or been exposed to through geofencing and beacon technology.

- Ensures workers report on their condition and wellness at Employer controlled and regulated timings.

- Allows bulk notifications, alerts and updates to be received by all of the workforce and ensures all people receive and acknowledge these.

- Provides the security and peace of mind for the workforce that they remain connected and protected regardless of their location or activity.

- Provides management with significant insights and data to support smart and informed decision making and necessary responses.

Data and Monitoring

Solo sends real time location and status data, including alerts and notifications, which are fed back to the system dashboard. The information captured provides real time visualisation but also provides critical data insights to enable rapid decisions and responses.

Solo has an inbuilt Incident Management System capable of planning and controlling an event or crisis. Organisations can choose to self monitor or connect to an alternate monitoring service. Vault is currently partnered with ADT.

Optimise the operation of isolated, mobile and remote workforces.
