

“Topsoe Academy’s very professional organization at all levels of the training, from the concept to the teaching methods, materials and the trainers, made this one of the top 5% professional trainings I have ever participated in”

Name: Dr. Christoph Hahn

Position: R&D Project Manager, responsible for catalyst selection and assessment from an R&D point of view

Plant: Ammonia plants, Borealis, Austria

Why did you join LEARN?

For me it looked like a great opportunity to learn about the basics of ammonia production and also increase my understanding of the processes and how everything works together and to get the overall picture of how things are interconnected in a plant.

What did you find the most useful during LEARN?

For me it was the content of the

training and meeting the people from Topsoe in person.

Which of the courses did you find the most beneficial and why?

I can't make a priority, all courses were of equal importance, but if I have to choose I would say the Plant Assessment & Optimization course was of special interest. But everything was very significant to me.

How will the knowledge gained help you when you go back?

It will help me a lot to be more at the same level when discussing with the operations experts. Now I feel that I understand how the plant works much better than before, and my overall understanding has increased significantly.

How was LEARN for you?

For me personally it was a great experience, and the great atmosphere between the trainers made it easy to feel welcome. For me it was also valuable meeting a lot of different people from Topsoe, finally being able to put a face on the names of people who I have been exchanging emails with. The courses exceeded my expectations.
