Summer Care Tips for your Lightspeed System

As the 2016-17 school year comes to a close, make sure you follow these easy steps to power down and protect your Lightspeed system over the summer.

1

Charge the microphone and any pod batteries fully after the last day of use.

2

Remove the microphones and any pods from the charger.

3

You may wish to **remove the batteries** and store them with the microphone(s).

4

Unplug your systems from the wall power outlet.

5

Put the room number on all systems, mics, and power cords and **store together** in a safe place. (Ziploc plastic bags work well!)

6

The batteries will hold a residual charge over the summer, and will only need to be charged up overnight before the first day of use.

7

Cover the amplifier to **protect the components** from summer construction/ renovation.
