## **Blending Syrup**

## PRODUCT FACTS

## TYPICAL PROPERTIES

Additive Treat Rate	_	EG CN 2.19% bv EG PM 1.11% bv
Color	Visual	Green
Specific Specific Gravity, 60°F	D1122	1.302
Pounds per Gallon	_	10.86
pH (Undiluted)	D1127	12.0 – 12.8
Freeze Point, °F (Undiluted)	D1177	40 min.

## **DESCRIPTION AND USE**

FCA-4 Blending Syrup is a single component additive package that is used to make premium quality antifreeze, which is designed for use in heavy-duty diesel engines that contains a chemical inhibitor system, which is Borate Based, with Nitrite to protect diesel engines from liner pitting and corrosion. Antifreeze made using FCA-4 is low silicate, contains a full charge of heavy-duty chemical inhibitors, and is compatible with SCA chemical filters. Antifreezes formulated with Borate/Nitrite chemistry are recommended for use in Caterpillar, Detroit Diesel, Cummins and other heavy-duty diesel engines.

FCA-4 Blending Syrup can be blended with ethylene glycol at a 2.19% by treat rate (1gallon FCA-4 makes 45.7 gallons) to make EG concentrate or at 1.11% by treat rate (a gallon of FCA-4 makes 90.1 gallons) to make EG premix when blended per Dober's blending procedures.

FCA-4 Blending Syrup makes antifreeze that meets or exceeds the performance requirements of the following specifications, and meets the low silicate limits of GM 6038M.

TMC RP 329 Cummins CES14603 Navistar ASTM D-6210

Caterpillar Freightliner 48-22880 ASTM D-4985 Detroit Diesel 7SE298

 Volvo GM
 ASTM D-3306
 John Deere 8650-5
 PACCAR

 SAE 1941
 Case Corp. MS1710
 MACK
