

RESIDUAL TEST KIT

Determines the presence of free residual chemistries in treated water.

The **HaloKlear Residual Test Kit** uses proven test methods for detecting the presence of residual chitosan before it leaves the job site. No need to spend thousands on WET tests or lose production time waiting for results. Testing with the HaloKlear kit costs only dollars per test and you get results within minutes.

We Give You What PAM Can't

Convenient

On-site testing
capability:
10 minutes

Economical

More cost
effective than
an offsite
laboratory test

Reliable

3rd party lab
verified

Dependable

Accurate
in-the-field
results

Added Safety Layer

Assurance against
detrimental
environmental
impact

This new patent-pending test kit improves accuracy by 25% compared to other kits. Results with the **HaloKlear Residual Test Kit** are more consistent and reliable than those of other test kits.
