## Esri Honors ETI Software with Fostering Engagement Award

*For Compelling Use of Esri Technology Driving Innovation in Telecommunications*

**ATLANTA, GA – March 11, 2020:** ETI Software Solutions was honored by Esri, the global leader in location intelligence, for its extraordinary application of the Esri GIS software. ETI was recognized at Sunday morning's Plenary Session during the annual ESRI Partner Conference in Palm Springs, California this past weekend. A partner company in the global Esri Partner Network, ETI was given the Fostering Engagement Award for "compelling use of Esri technology to drive systems of engagement with innovation in telecommunications."

ETI Software's Beamfly geo-spatial solution, powered by Esri, provides a fixed wireless dashboard with real-time device monitoring and management for telecom service providers. The Beamfly dashboard gathers information from any TR-069 enabled CPE and displays real-time information that can identify issues before consumers are impacted as well as historical data for network trending analysis and monitoring.

"We are honored to receive this award from Esri," said Brad Hine, Product Director of Analytics Solutions for ETI. "GIS technology is essential to the Beamfly solution that enables service providers to improve the customer experience with zero-touch activation, instant access to services, proactive issue resolution and detection of potential issues."

ETI's partnership with Esri and this award truly acknowledges the value, impact and innovation that ETI's Beamfly geo-spatial solution brings to telecom service providers.
