

OPALQM REPORTS AND ANALYTICS: TAKE CONTROL OF YOUR INFORMATION

OpalQM's unique reporting and analytics solution is second to none. We've created the **reports you need** and provided the power to **create your own custom reports**.

The Reports you Need

Whether you want a complete picture of your students' performance to determine if your students are meeting their clinical requirements, or to see if outcomes vary by site, OpalQM gives you the information you need. Our reporting module collects information from school and national exams, clinical evaluations and logbooks, and even from students' usage of OpalQM itself, to provide you with an integrated view of your curriculum, your students, and your school.

"OpalQM is taking our teaching, learning, evaluation and communication to a new level."

- Dr. Sat Sharma,
Director, Medical Informatics

Business Intelligence Analytics

Business intelligence is a new paradigm for analyzing your curriculum. OpalQM has the ability to provide analytics that allow you to interact with the data, search it, sort it, filter it, and then move back and forth between the dashboard and the curriculum itself. Analytics allow you to drill down into the source of the data itself to see the information in context and make informed decisions about your curriculum.

Create Your own Custom Reports

Why pay the vendor to write reports for you when you can do it yourself? Only OpalQM allows you to create your own reports through its standard SQL interface. Staff familiar with SQL can create, filter, and export their own reports, and extract the data you need quickly and easily without having to make a support call. Of course, you can always request help from us for your most complex or high priority reports—while still having the flexibility to easily extract the information you need, when you need it.

```
Run.sql - 130.179...kServer (sa (124))
SELECT * FROM [FeedbackSe
ORDER BY
[Survey Type],
[Student Name],
[Preceptor Name],
[Course Name]
```
