

DaaS DBA Operations

Overview

Through a series of extensive presentations, materials, and lab exercises; this hands-on course provides all of the skills needed by those who are responsible for the protection and recovery of database applications protected by the Actifio appliance.

This course provides detailed operational information of the Actifio appliance, including; the protection and recovery of protected database images and logs, reviewing reports and alerts, monitoring the system dashboard, and managing jobs and events.

Delivery

Training classes provide live presentations, demonstrations, and Q&A by Actifio Instructors via GoToTraining or onsite. Access to a series of hands-on lab exercises for students is via remote access to the Actifio Virtual Training Lab.

Duration

This class is conducted onsite in one eight-hour, and one four-hour sessions, or remotely in three half-day sessions, typically from 1:00 PM to 5:00 PM Eastern Time for the Americas. Additional classes and times are scheduled for Europe/Africa and Asia/Australia. (3 Training Units)

Prerequisite

None

Registration

log in to your Actifio Now account to learn about all Actifio University offerings, or to request course registration information for training classes by email; ActifioU@actifio.com.

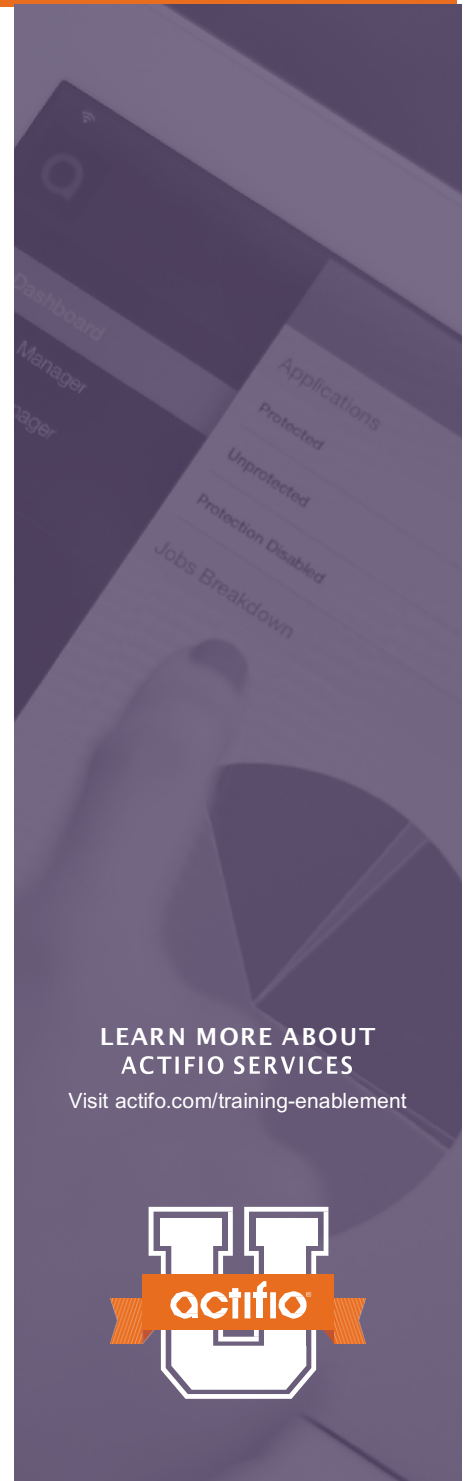

Training Course Outline

Course Introduction

This module describes the course, its schedule of completion, and all of the course modules.

Actifio Product Overview

This module diagrams and provides an overview of the Actifio appliance architecture and deployment options. Additionally, this module introduces the discovery, protection, and recovery processes for copy data protection.

DaaS DBA Operations (continued)

Discover, Protect, and Recover Hypervisor Database Applications

This module covers how to add host devices, configure ports, discover the underlying database VMs, protect the VMs, and various recovery options.

Discover, Protect, and Recover Connector-based Applications

The Actifio connector is a small footprint process to allow Actifio to capture application data. This module covers how to install connectors, discover database applications, and upgrade connectors.

Configure Workflows

This module details the steps in configuring workflows to automate the scheduling for provisioning work environments, reporting, and data warehousing.

Actifio Report Manager (RM)

The Actifio Report Manager is a web based reporting service that enables you to generate various reports to analyze and understand copy data management in your organization. This module will show you how you use the Actifio Report Manager to Create, View, Search, Run, Schedule, and Save reports, Create report schedules to run automatically, and Schedule and manage email subscriptions to roll out reports to a large recipient

Managing Actifio Appliances with Actifio Global Manager (AGM)

AGM allows for the management of multiple Actifio appliances from within one user interface, allowing you to deliver standardized SLAs, and one-click migration of applications between the appliances.

Troubleshoot the Most Frequent Support Issues

This module provides practical advice in treating some of the more common troubleshooting issues, using the Actifio Knowledge Base for research, troubleshooting decision trees, and support case management.

Latest Software Features

In this module, will discuss the latest new features added to the appliance software release.
