

Actifio GO for Enterprises

Actifio GO is a one-of-a-kind SaaS offering which enables Enterprises to implement cloud-based backup and recovery for VMware VMs residing on-premises.

How does Actifio GO help Enterprises?

Enterprise Challenges	How Actifio GO Helps
Expensive data center storage costs to backup VMware VMs	Eliminates data center storage by utilizing cloud object storage, therefore eliminating CAPEX costs
Capacity management when backing up new or large amounts of VMware VMs	Cloud object storage is infinitely scalable which means no complicated storage calculations and operational burden
Lifecycle management (patches, upgrades, etc.) for backup and dedupe appliances is cumbersome	Actifio GO SaaS platform takes care of all software updates, therefore reducing OPEX costs
Complex architecture of media servers, storage, dedupe appliances, managing rack space, power, etc. for deploying new backup solution	Actifio GO SaaS platform is extremely simple to use: Register, Download, Deploy, and Protect VMware VMs in 1 hour
Complex pricing models based on per appliance or per TB or per socket, with various vendors, for backup software, dedupe appliances, and storage leads to very high TCO	Actifio GO offers simple annual subscription pricing per VM which provides the lowest TCO

What features does Actifio Go provide to Enterprises?

Actifio GO Feature	Benefit
Self-service sign up, push button deployment and central management	Simple and easy to use SaaS platform to deliver backup and recovery of large VMware environments
Incremental forever backup to cloud object storage	Small and efficient backup window
Backup VMware VMs directly to cloud object storage with no local storage needed in the data center	Eliminates data center storage costs and storage capacity / lifecycle management complexity
SLA driven data retention from days to decades in cloud object storage	Satisfy compliance needs with long term data retention
Encrypt data in transit and at rest	Ensure data is safe over the network and at rest in cloud object storage
Instant mount and recovery from cloud to data center	Mount VMware VMs instantly from any point-in-time directly from cloud object storage to the data center and recover in minutes
Google like search catalog for file / folder restore directly from cloud object storage to data center VMware VMs	Simple and fast file / folder granular restores
Protect 1000s of VMware VMs with very small compute requirements, for example: 1000 VMs with 8 cores and 48 GB memory	Significant reduction in TCO, capacity management, and lifecycle management
