

FACT SHEET | CollaborationRoom

Meets the most stringent requirements for secure collaboration

The trend for limitless mobility poses multiple challenges to companies. Information workers often access files on free but non-secure cloud solutions to circumvent their companies' insufficient support for mobility.

Employees expect to be able to work on important projects at any time. That is a legitimate demand – and it is also good for business from the productivity point of view. This is why IT departments are increasingly being asked to provide appropriate solutions that enable secure, mobile collaboration.

The Brainloop CollaborationRoom fulfils these needs at the highest level. The solution integrates seamlessly with companies' existing working environments and helps them to meet their compliance and security requirements at all times.

„Our objective wasn't to find a document management system with some security functions, but a security system with some document management functions that would also help us meet our bank's compliance rules.”

Christoph Zajic, Chief Security Officer, Volksbank Vienna-Baden (Austria)

BENEFITS FOR USERS

- > Ease of use – integrated in Microsoft Office, full text search, automatic versioning and more
- > Collaborative document editing – across departments and companies with integrated document management
- > No attachments – documents are only sent as a link so their protection is maintained
- > Mobile-enabled – via web browsers, apps for tablets/iPhone
- > Rights management and security categories – easy compliance with internal policies
- > Multilingual – available in English, German, French Spanish, Italian and Portuguese

BENEFITS FOR DEPARTMENTS AND PROJECT MANAGERS

- > Simple and intuitive – departments and project managers can manage their CollaborationRoom themselves
- > Traceability of every action – with a tamper-proof audit trail of all activities in the CollaborationRoom
- > Two-factor authentication – Choice of several options for multi-authentication
- > Automatic implementation of corporate policies – confidentiality classifications (e.g. internal, confidential, strictly confidential), security policies and conditions of use are obligatory for users
- > Project-related protection mechanisms – flexible room configuration, e.g. to stop documents being sent to external people, role-based rights allocation, requirement to send out all documents with a watermark or in Brainmark format (watermark, document ID and fingerprint), enforced email encryption

MEETS COMPLIANCE AND AUDIT REQUIREMENTS:

- > Tamper-proof audit trail
- > Data storage in the customer's own datacentre or in one of the certified datacentres in England, France, Germany, Austria, Switzerland or Luxembourg
- > Regular security audits conducted by independent third parties and customer audits
- > Complies with data protection requirements

BENEFITS FOR IT ADMINISTRATION

- > License and storage space administration – user and storage management with centralised admin, daily pro rata billing
- > Dataroom Centre administration – centralised management of datarooms, users, dataroom templates, logos and style sheets
- > Centralised security and authentication rules
- > Easy roll-out in the enterprise – Active Directory integration available

HIGHEST SECURITY STANDARDS

- > 256-bit AES/TSL end-to-end encryption – on server, mobile devices and during transmission
- > Access security – two-factor authentication on all devices
- > End-to-end document protection – Information Rights Management, watermarks, document IDs and fingerprints
- > Operator and administrator shielding – no access to content or processes by Brainloop or a company's own IT staff
- > ISO 27001 certification – applies to all European servers and the Brainloop Operation Team
