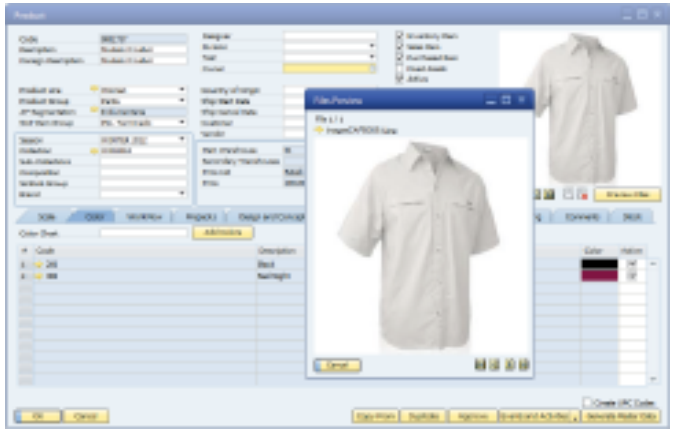
Product Data Management (PDM)

Product Data Management application is for product-centric businesses that need to maintain, store, and use large amounts of product-related data across the company processess.

Manage Images, Colors, Materials, POMs. Sketches, concepts, documentation and images can be added to the style from a file or an existing drawing tool. Manage raw materials and labor costs.

Add Point of Measures based con templates. Once the style cost and pricing are approved, generate SKU information directly from the product data management.



Season and Collection Planning

Have visibility of the design process that you need in order to merchandise new collections at the beginning of each season

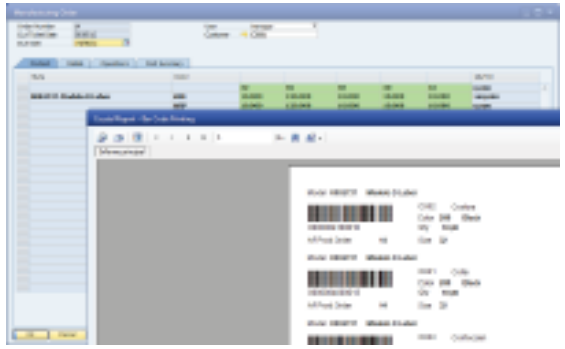
Advanced Planning and Scheduling (APS)

APS is used for detailed planning in enterprises, since order times, lead times, transition periods, capacity allocations, availability of resources are critical parameters in the value creation process.

The graphical visualization of all activities with the resources achieves a high level of transparency and allows to see where and how intervention is required.



Reporting

Creates reports for nearly every aspect of your enterprise, including customer and supplier debt, sales, cash flow, customer-contact summaries, bookkeeping, warehouse stock, financial statements, pricing, and customer activity.

Successful Cases

Alpargatas USA

Managing a Complex Product Portfolio to Offer Exciting Customer Choices.

As every fashion lover knows, a shoe is not just a shoe. It is a statement. And shoes from Havaianas make statements as spectacular as the person wearing them. Pink soles and yellow straps? No problem.

Emerald heels? Done. Terrificturquoise straps? Coming right up. Thanks to SAP® software, Havaianas delivers footwear as individual as the foot it frames.

Bacup Shoe

Implemented SAP Business One with apparel & footwear modules

Tim Smith, Managing Director, Redfoot Shoes. Redfoot Shoes is the footwear division of Bacup Shoe, a leading supplier of made-to-order quality footwear. The company also has a warehousing arm – Alpha Logistics.

Through their partner, Signum Solutions, SAP Business One was implemented in just two weeks at Alpha Logistics. Immediate benefits included automated stock control, accurate stock allocation, and improved customer service through better access to customer history. Following the successful implementation at Alpha Logistics, SAP Business One will be implemented at Redfoot Shoes.
