

Today's industrial employee is not looking for more dashboards or distractions in their day. What they need is the right knowledge, at the right time, on the right device. The way that people work and learn is in a process of significant transformation. Rapidly evolving hardware, intelligent software, shifting demographics, and global supply chains have disrupted the traditional models of enterprise information sharing. How does an organization increase productivity, reduce skill gaps, and limit operational risk?

PROJECT OPTIONS

A DIGITAL GUIDE

Deliver work instructions, safety alerts, and contextual insights to industrial workers in real-time with curated knowledge based on the employees' digital identity. By incorporating machine learning within the curation engine, contextere ensures that the work guidance continuously evolves and maintains its relevance as the individual's performance and operational environment changes.

B INTELLIGENT INSPECTION

Bring your inspections to life with live data, equipment intelligence, and enriched analytics at the inspectors' finger tips. Empower your inspectors and QA teams to complete compliance and assurance activities in less time with more accuracy.
