

Vaporesso Firmware Guidance

*You can check the firmware version on your device by pressing fire and mode button simultaneously for 2 seconds.

Installation

1. Download the firmware package from <http://www.vaporesso.com/download-manuals-for-vapes>
 - * This firmware applies to Revenger/Revenger X/SWAG kit(SPCBAT version)and Nebula kit.
 - * For SWAG kit, please check your hardware version by long hold FIRE and MODE button simultaneously for 2 seconds. If you see TPCBAT9, this guidance is not suitable for you, please refer to the other Firmware.
2. Run the Installer file and install the firmware.
 - *Please do not change the default install folder, otherwise the installation could fail.

Update and Customize

-Update

1. Run the firmware and connect your Vaporesso device with computer by USB cable. Keep your battery inside the kit during the whole connection.
2. The name of your device will appear after Device name and green light is on at the left bottom corner after the device is successfully connected.
You can also read the firmware version directly in the blue blank.

3. Choose "sf_update" and "Open file" button to select the latest firmware update that you shall have downloaded from the website.

4. Press "Update" button to update firmware. Wait until the updating percent reach 100%. Please do not unplug the USB cable in this progress.

5. After update, device will turn off for one second and auto reboot. Please do not unplug the USB cable during the whole process until the device is connected again and you may check firmware version now.
