Cooper Can Outsmart Mice

Who Am I?

Mouse

I have four legs, a long tail and can squish my body down to fit through small cracks. I am a mouse. Some people are scared of me and some people like me. I usually live outside but sometimes I will make my home inside your home especially when the weather gets cold outside. I run very fast and cannot see very well. I also like to walk or run along walls and when I do I use my whiskers to guide me since my eyesight is poor. I love to eat all kinds of food and if I come into your home I may stop in your kitchen for a snack.

How Does Cooper Outsmart Mice?

Cooper Pest Solutions knows the basis for the control of mice begins with keeping them out of the structure. Mice can squeeze through holes as small as a quarter inch, and therefore the primary objective of the Cooper team is to find these opening which rodents can enter. Additionally, Cooper Pest seals up these openings as part of many of our pest management programs. Once rodents are inside a structure there are many ways to control the problem and solutions are determined based on the needs of the client.

About Cooper

Cooper Pest Solutions is a family-owned business that residents and businesses have trusted since 1955. With our team of two entomologists, numerous environmental specialists and a licensed sanitarian, we develop unique programs that separate us from the rest of the pest control industry. From maintenance and prevention services to environmentally-conscious programs, call Cooper and find out why.....
