

Connectivity Services

Enabling Effective Connectivity

At home. At work. On the go. The network is the foundation from which we build our digital lives. Similar to the plumbing in a building, networks, like pipes, make business connectivity effortless. Additional services, such as voice, video and security, are built on top of this foundation. As a business, you rely on your network to deliver the content that matters to you securely and expediently. Network solutions keep your employees connected and productive wherever they are. **LookingPoint** provides enterprise grade networking solutions supporting voice, video, data and security. It doesn't matter if you are looking for cloud managed, on-site, or co-location networking services; we provide it all.

Our Services

Design

LookingPoint's solution architects focus on aligning the network infrastructure design to meet your business requirements, while keeping in mind:

- Business agility
- Existing technology
- Network availability
- Total cost of ownership

Implementation

This phase includes our Project Management and delivery teams.

- Work closely with your internal IT staff to outline a detailed road-map for implementation.
- Provide frequent updates through the entire build process.
- Accommodate ad-hoc questions throughout implementation.

Support and Management

Once all the dust has settled and you are successfully running on our newly deployed Network LookingPoint provides options for ongoing Network support.

- In-house network management
- On-demand network support
- Complete network support
