

Virtulization

Seamlessly Integrate On-premise Technology with the Cloud

Virtualization can apply to applications, servers, storage, and networks. It is the single most effective way to reduce IT expenses while boosting efficiency and agility for all size businesses. Virtualization can increase flexibility, and scalability while creating significant cost savings. Workloads get deployed faster, performance and availability increases and operations become automated, resulting in IT that's simpler to manage and less costly to own and operate.

- Virtual environments have an SLA average uptime of **99.5%**
- Virtual environments resource provisioning time is accelerated **from 50% to 70%** over physical environments
- Virtual Environments business response time **accelerated from weeks to a few hours**
- Hardware costs of a virtual environment are reduced by up to **50%**
- Energy costs are reduced by up to **80%** in virtual environments

Benefits

Simplified IT Management: Intelligent automation capabilities eliminate the need to manually perform routine maintenance and troubleshooting, and help IT to proactively detect and resolve issues to reduce downtime.

Robust Security: In a virtual environment, security can be delivered as an efficient software-defined service applied precisely where needed, without hardware upgrades.

Flexibility and Agility: Leverage advanced virtualization capabilities to build an IT infrastructure that is highly responsive to business and customer demands.

Reduced Complety: Virtualization creates a foundation for more efficient IT management and an improved ability to focus on business priorities.

Lower Cost: Significantly reduce expenses and make the most of resources through effective pooling, increased automation of operational processes, and the appropriate use of available public cloud services.

Business Continuity: Virtualization creates a highly available environment that helps ensure that all your applications are accessible all the time.

Simply Different

Lookingpoint has significant experience designing, deploying, and supporting virtual environments. Our knowledge of networking, storage, and compute positions us to be a great resource for your organization. LookingPoint can show you how to optimize your virtual environment, enabling faster provisioning of applications and simplified data center management. Increase IT productivity, efficiency, agility and responsiveness.
