Cisco Identity Services Engine

Faster - Smarter - More Secure

Mobility, digitization and the Internet of Things (IoT) are changing the way people live and work. The enterprise network no longer rests within four secure walls. A dissolved network perimeter requires customers to figure out how they will digitize their businesses to remain competitive, while maintaining their brand integrity. Protecting your intellectual property, and safeguarding key customer and employee data is critical for the business of tomorrow.

Secure and manage your evolving network

Cisco Identity Services Engine (ISE), for secure access management, is a single policy control point for your entire enterprise (Wired, Wireless, VPN). ISE brings together the industries most rigorous identification and access control technologies in one simple automated solution. Before granting access to anyone or anything ISE creates a contextual identity. It looks at user, time, location, type of device, and even its health for compliance, and then applies relevant policies to control what resources can be accessed.

Benefits

Secure Access Control
Centralize and unify highly secure access control based on business roles. Provide a consistent network access policy for end users via wired, wireless, and VPN networks

Greater Visibility
Gain greater visibility and more accurate device identification. Device profiling, and the device-profile feed service, reduce the number of unknown endpoints

Accelerated Mobility
Use self-service device on-boarding, internal device certificate, and mobile device management for on-boarding both on and off premise

Stop and Contain Network Threats
Enforce role-based access control at the routing and switching layer, and dynamically segment access without the complexity of managing multiple VLANs

Share User and Device Data
Share user and device data with partner networks and security solutions. Improve their overall efficiency and accelerate the time to contain network threats

Expert Experience

When deploying Cisco Identity Services Engine (ISE) you need someone experienced to guide you through the journey. LookingPoint has experience navigating the rich features and capabilities of ISE, and will evaluate your business requirements and translate them into a solution that works best for you. Our solution architects have the training and experience needed to successfully guide you through a seamless deployment.
