

# Hyperconverged Infrastructure

**More performance, more workloads, more simplicity.**

You need systems that can adapt to match the speed of your business and deliver complete hyperconvergence, while combining computing, storage, and networking resources into a simplified, easy-to-use platform. HyperFlex systems deliver the agility, scalability, and pay-as-you-grow economics of the cloud, but with the benefits of on-premises infrastructure. It includes hybrid or all-flash configurations, an integrated network fabric, and powerful data optimization features that bring the full potential of hyperconvergence to a wide range of workloads and use cases. Hyperflex is faster to deploy, simpler to manage, and easier to scale than the current generation of systems. It is ready to provide you with a unified pool of infrastructure resources to power applications as your business needs dictate.

## Benefits

**Agile:** Get an end-to-end solution that helps you move faster and achieve your digital transformation.

**Adaptable:** Be ready for an expanding range of applications and operating models.

**Complete Hyperconvergence:** Unify fabric network and computing technology in a next-generation data platform.

**Flash Optimized:** Gain high performance and storage longevity with a file system built for hyperconvergence.

**Flexible Scaling:** Scale nodes, computing, and capacity independently in clusters as needed.

**Continuous Data Optimization:** Increase capacity use while maintaining performance with data deduplication and compression.

**Enterprise Data Protection:** Implement data replication for high availability, remediate hardware failures, and alert your IT administrators for quick resolution

## Simply Different

LookingPoint has expert experience navigating both cloud and on premise infrastructures. Hyperconvergence draws from our expert experience, and sets the stage for our solution architects to design and implement your next generation infrastructure. We understand the need for your infrastructure to be designed with simplicity, scalability, and the right mix of capacity and performance. We will evaluate your business requirements and translate them into a solution that works best for you. Our solution architects have the training and experience needed to successfully guide you through a seamless deployment.
