

# SMARTDRIVE FOR OIL & GAS FLEETS

## PROTECT YOUR OPERATORS AND YOUR FLEET.

Designed for the most discerning company, the SmartDrive® video-based safety program gives oil and gas fleets unprecedented safety performance insights and analysis—increasing productivity, while helping to save lives, expenses and fuel. Our video analysis, transportation intelligence and personalized performance program helps fleets improve driving skills, reduce collisions, ensure compliance and lower operational costs.

## TRANSFORM YOUR FLEET'S PERFORMANCE WITH VIDEO INSIGHT

Eliminate risky driving and working behaviors that lead to collisions and workplace injuries, and drives up costs with a video-based safety program that is as powerful as it is easy-to-use. You save time and deliver more effective operator coaching. Your fleet reduces collision frequency and workplace injuries, and exonerating operators when they're not at fault - ultimately, bringing operators home safely.

## 360° OF SAFETY

With safer operators, fleets reduce fuel, maintenance and insurance costs—along with workers comp and false claims—resulting in dollars dropping to your bottom line. Our SmartDrive 360 solution gives you insight into risky driving maneuvers and non-compliance to safe workplace practices, providing an unprecedented level of coverage and complete visibility to risk behind the wheel and outside the vehicle.

## INNOVATIVE PLATFORM

As the only video-based safety solution with flexible camera options, the SmartDrive program is the only solution that provides an open platform that protects your investment for the long term. In addition, it integrates with active safety systems, specialty equipment, additional cameras and the ECU to capture a comprehensive view of risk.

SmartDrive video-based safety solution reinforces safety policies and compliance with regulations.

## MANAGED SERVICES SAVE YOU TIME

Though a dash cam might capture a collision, this action alone doesn't identify the contributing factors or prevent future collisions. That's why SmartDrive offers a fully managed service, alleviating fleet managers from the tedious tasks of reviewing video footage and analyzing data, while offering a consistent and unbiased insight into risk. As a result, fleets maximize the value of their video safety investment and operators benefit from a program they can trust.

In addition, a managed service delivers analyzed video that accurately measures an operator's exposure to risk. As a result, fleet managers can quickly identify which operators are more likely to be involved in an incident and can allocate time for coaching appropriately.

## INNOVATIVE PLATFORM

SmartDrive Solutions integrate with third-party cameras, giving fleets greater insights from multiple points of view. Video from multiple angles enables fleets to fully comprehend what was happening in the cab and what was happening around the vehicle when an incident occurred. That complete picture adds valuable context for reconstructing incidents, coaching operators to improve

their skills and providing insightful awareness for ongoing training. Integrating with multiple cameras, the SmartDrive program helps oil and gas fleets improve safety, minimize incidents and reduce costs.

**SmartDrive Extended Recording** provides oil and gas fleets with continuous video recording capabilities, providing fleets with insights into pre- and post-incident results; supporting investigations; and providing additional insights of on-site situations. When something happens, additional video provides critical answers to what led up to the incident, what happened afterwards and why the incident happened at the site. Oil and gas fleets get critical information to help them properly address incidents and minimize future occurrences.

## RESULTS

Speeding  
69%

Distractions  
59%

Fatigue  
74%

Unsafe Following  
75%

**Collision Frequency lowered by over 50%**
