Amb3E was awarded the Packaging Licence

Amb3E is now the waste management compliance HUB in Portugal and is able to offer a unique and integrated waste management service in Portugal

Lisbon, 10th of August 2017 - Amb3E – Associação Portuguesa de Gestão de Resíduos, the manager of the Rede Electrão, has recently been awarded the Licence for the flow of packaging and packaging waste. With its entry into this market for packaging, Amb3E extends its business to become the leading entity offering customers an integrated service for the management of 3 waste streams: electrical equipment, batteries and packaging.

“This is the product of a strategic decision on the part of the organization to provide an integrated service in the form of a *one-stop-shop* that will allow our clients to comply with all of their legal recycling obligations for all of the residues that they generate through a single supplier.”, explains Pedro Nazareth, Director-General of Amb3E.

The licence that has been awarded today by the Secretaries of state for the Environment and for Trade allows Amb3E to offer a waste management service with the highest competitive values that also ensures the rigorous fulfilment of all legal requirements through the efficiency of the environmental performance of its system.

“This is another milestone in the history of Amb3E that will strengthen our relationship with our original client-base in the electrical and electronics sector and improve our packaging management system so that we merit the confidence of new clients from other major sectors of the national economy”, concluded Pedro Nazareth.

Amb3E is now aiming for a market share that will allow the company to position itself as a leading strategic partner for Waste Management Systems, contributing to the operational optimization of the entire system and for the fulfilment of national targets for the collection and recycling of waste packaging.

de Gestão de Resíduos

Amb3E provided the APA (Portuguese Environmental Agency) with its Specifications in October 2016 when a tender was submitted for the management of waste packaging streams, the licence herewith awarded taking effect from 10th August.

About Amb3E:

Amb3E – Associação Portuguesa de Gestão de Resíduos, manager of the Rede Electrão, is the leading electrical, electronic and used battery waste management company. Founded in 2006, the company today has a 65% market share and has a client base of 1,500 businesses in the electrical and electronics sector. Rede Electrão has over 2,000 electrical waste collection points distributed throughout the country. Over the past 10 years the company has collected 360,000 tonnes of waste. On the 9th of August 2017 the company was awarded its third licence – this one for the management of waste packaging materials – that allows the provision of an integrated service for the disposal of electrical equipment, batteries and packaging streams.
