

Decision Matrix

As a result of retrieval efforts by SafeTec or additions by your team, newer versions of documents will be introduced to your system. To give you another layer of review and confidence in captured data, SafeTec has created the Decision Matrix tool. This tool allows administrators to approve or ignore the consolidation of new revisions with existing records, and to help with this decision the tool exposes the data variances between the two records.

This document will walk you through how to find and use the SafeTec Decision Matrix. Once you have approved the records to be consolidated the system will consolidate information and archive the older version. For a description of the consolidation rules we employ, please see the final section of the [Duplicate Resolution](#) help file.

Please reach out to your account manager if you think your organization can benefit from the Decision Matrix or if you have any question.

Decision Matrix Glossary

The Decision Matrix is driven by differences, or data variances, between new revisions and existing records. SafeTec has organized these variances into the categories described below.

Data Variance Types

Data Variance Type	Definition
Identifying Information Changed	Identifying information Includes Product Name & Manufacturer
Ingredient Percentage Changed	Refers to any change in the Min % or Max % ingredient concentration values
Ingredients Added or Removed	Ingredients for a product can change, and this variance type is used for the addition or removal of ingredients between original and new documents.
Now GHS	Refers to a record that meets GHS formatting requirements and contains GHS elements, where the original document did not.
Regulatory Impact Changed	Product composition (ingredients) changes between versions can impact whether or not a material is regulated under certain regulatory lists.
No Changes Identified	Refers to documents where none of the data points listed above have been updated. Variances such as Revision Date and Product Number are not tracked in the Decision Matrix

The submission source, or origination, of new revisions may also be relevant to an administrator's analysis of incoming documents. The origination types are described in the table below.

Origination Types

Origination Type – Search Filter	Origination Type – Search Results	Definition
Customer New Revision	SDSNew New Revision	Record created as New Revision in SafeTec Web
	SDSNew Online Submission	Record created as new MSDS in SafeTec Web
Customer or SafeTec New Revision	SafeTec Library Subscription	Record created as add from the SafeTec Library in SafeTec Web OR Record created via SMIS when a document is found in the Library during an On Site Inventory
SafeTec New Revisions	Retrieval Complete Sourced Version	Record created via Retrieval Complete, sourced during a Monitor Effort or Acquisitions project
	Linker Internal Submission	Record created via Linker, which is created by SafeTec Operations when a record is scanned into the database
	Submission Agent Internal Submission	Record created via Submission Agent, which is a document that is submitted as an electronic file to the Data Processor
	SMIS Acquisition Target	Record created via SMIS when a new material is found during an On Site Inventory
	SafeTec Administrator Internal-General	Record created via SafeTec Administrator
	SafeTec Connect API Submission	Record created via MSDS/Add endpoint in Connect, which uses API endpoints to create the document record

Review Pending SDS Retrieval Decisions

1. From the main menu, click the **Decision Matrix** button.

[Decision Matrix](#)

2. The **Decision Matrix** will open to the **Pending** tab. Documents you ignore or resolve will be moved from the **Pending** tab to the **Ignored** and **Resolved** tabs, respectively. Details on the latter tabs are found in later sections.

Pending Ignored Resolved

SDS Name

Manufacturer

SDS Number

Mfg Product Number

Facility

Data Variance Type

Origination Type

Has Ingredient Overrides

 Search

3. To search, you can either specifically look for records using the search fields, filter by a specific Data Variance or Origination, or you can leave all fields blank and click the **Search** button to see all records waiting your decision.

4. The search results grid will display the documents in which a new revision has been submitted for an existing record in your system, for example the New and Old Product Name, Data Variance(s), and Origination. In the search results grid you can also see if the old document has an Ingredient Override (**Has I/O**) if the box is checked. If this box is checked, you know that your older ingredient overrides will be lost during consolidation, and this record may need extra attention during review or after consolidation is complete.

6. A **Data Variance** popup window will open. It shows the difference in document names, manufacturer names, revision dates, product numbers, and if the documents have GHS elements. It also shows the difference in ingredients, and how those ingredients impact regulations you have loaded on your SafeTec account.

- a. If you wish to review both documents, click the **View Documents** button at the top of the screen, and two additional browser tabs will load with the documents.
- b. The various colored circles next to data are quick glance indicators to change. Green indicates the data is exactly the same for that field, and red indicates there are differences.
- c. If there are difference in ingredients, they will also be highlighted.
 - i. If the new document does not have ingredients found on the original document, the old document's ingredients will be highlighted red.
 - ii. If the new document has ingredients not found on the original document, the new document's ingredients will be highlighted green.
- d. The Revision Date and Product Number fields are not considered in document analysis, and are included in the *No Changes Identified* category.

7. Click the **X** in the upper right or **Cancel** button in the lower right corner to close the **Data Variance** window.

Data Variance

The system has identified a variance of key data elements between the source document and the newer version and are described below.

Approve Ignore Cancel

Ignore Pending SDS Retrieval Decisions

The **Decision Matrix** allows you to ignore new revisions which may be useful to reduce the volume of records sitting in the pending tab while investigating data variances further. After reviewing the data variances and deciding not to immediately accept a new revision, you can ignore one pending revision or bulk ignore multiple pending new revisions through several methods.

WARNING! Please note that once you ignore a pending new revision, the record will not be pulled into future retrieval efforts automatically, e.g. Monitoring projects.

Ignore One Pending SDS Retrieval

1. To ignore a single record from the search results grid, click on the **Ignore** button to the right of the record.

Review Ignored SDS Retrieval Decisions

After ignoring records, you will always be able to review and resurrect these at any point in the future using the **Ignored** tab. Searching for records and reviewing the data variances for ignored records can be done in the same way as described in the sections above. Below we describe how to resurrect a single ignored record or bulk resurrect multiple ignored records.

Resurrect Ignored SDS Retrieval Decisions

If you have previously ignored records but would like to resurrect one or more to the Pending tab and approve, you can do this through several methods.

Resurrect One Ignored SDS Retrieval

1. To resurrect a single record from the search results grid, click on the **Resurrect** button to the right of the record.
