

Safetec System Requirements

Supported Browsers

SafeTec officially supports the following browsers for our services provided, Right-To-Know and Admin websites.

- Internet Explorer versions 7, 8, 9, 10, 11.
- Mozilla Firefox (recent versions)
- Google Chrome (recent versions)

Our applications are developed and tested with these browsers on Windows platforms. However, being it is a web application it should run on any modern browser with the following standards.

- 128-bit encryption
- SSL 3.0/TLS 1.0

Notes

Cookies must be enabled in the browser in order to use our web applications.

Because of the "continually-up-to-date" nature of both Google Chrome and Mozilla Firefox, we recommend running the latest versions of these browsers as that is the version the application is tested with.

Supported Operating Systems

Since our system is a web application, it should run in any modern browser on any platform. However, we are currently limited to providing support for browsers running on Windows installations only.

Just as Microsoft does not support Windows XP nor do we.
