

OneFile and Cognisoft Yeti

Integrate your OneFile account with your Cognisoft MIS for efficient and cost effective data management. With this integration, customers can create learners in OneFile through the Cognisoft MIS.

There are 2 versions of the integration. You can use OneFile's API to create a 2-way integration. Alternatively, you can set up the integration using Windows Services, which is a 1-way integration. Please speak to our support team to find out which option is best for your requirements.

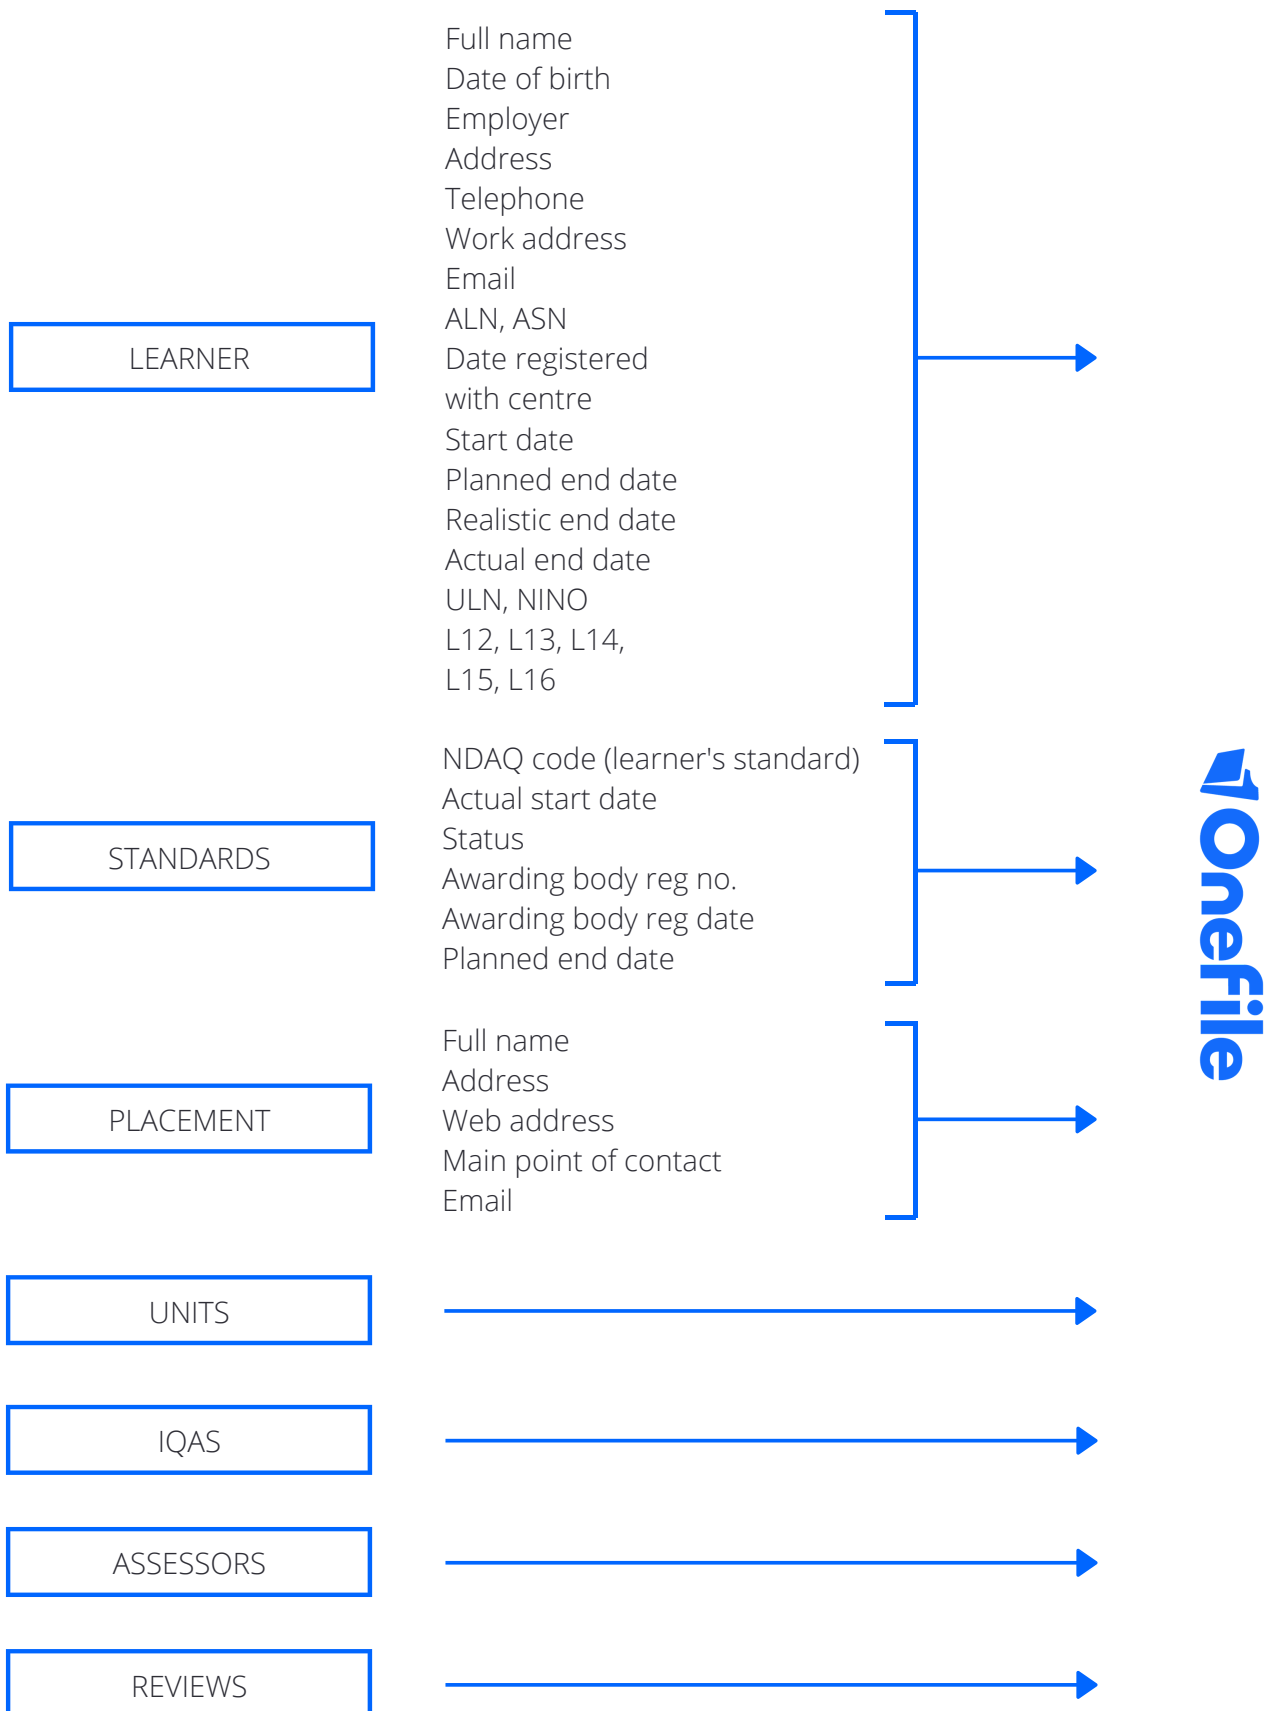

Creating the integration

- Contact your customer success manager to discuss the integration. They'll be able to tell you more about how the integration works.
- You'll then be able to set up your centre and configure the integration to your requirements.

Integrated fields
