

OneFile and Tribal Maytas

Maytas can be integrated with OneFile so that assessor, employer and trainee (Learner) records can be uploaded to OneFile, and learning aims can be downloaded from OneFile. Please note the OneFile integration is a licensed feature which can be purchased by contacting your Maytas account manager.

How do I set up the OneFile Maytas Integration?

To set-up the integration, please email support@onefile.co.uk and request the creation of a API token for your organisation. We'll provide you with your customer token, URL and default OneFile organisation ID.

Maytas User Permissions

Once you have your customer token, URL and default OneFile organisation ID within Maytas, Under Tools and Edit Permissions, select the user in question and click on to the 'Modules' tab. Maytas have a new section headed 'OneFile Integration' and ensure the user required this is set to 'Visible'

If you have any questions about implementing and using our integrations, or if you would like to build your own integration into our software, please email support@onefile.co.uk.
