BRITISH ENGINEERING SERVICES CERTIFICATION SERVICES AS A UKAS ACCREDITED CERTIFICATION BODY

ISO 9001 certificates are issued by Accredited Certification Bodies to suppliers operating quality management systems which are in line with these International Standards. They provide customers with a clear view that their supplier (or potential supplier) has a basic systematic approach to the business and that a Certification Body of integrity is overseeing the system by regular surveillance visits.

Achievement of ISO 9001 certification has therefore become a basic 'entry' requirement for many suppliers, particularly those wishing to export and/or to meet the conditions imposed by major purchasers or purchasers with special responsibilities to the public.

The scope adopted by British Engineering Services concentrates on areas of its engineering expertise, particularly in Metals, Plastics (including GRP), Fabrication, Machinery, Lifts and in the General Manufacturing and Engineering Services Fields.

As an organisation with wide national coverage, British Engineering Services is able to provide suitably qualified personnel local to most manufacturing centres in the UK and certain other countries. Our breadth and depth of experience with the many technical specifications and requirements further strengthens system registration to ISO 9000 series as an asset to the supplier and purchaser alike.

British Engineering Services Limited has been accredited by the United Kingdom Accreditation Service (UKAS) for many years under our previous name of Royal & SunAlliance Certification Services (RSACS) and we apply our own systems thoroughly and conscientiously to ensure continuing compliance with UKAS requirements in line with both their intentions as well as their strict interpretations.

British Engineering Services recognises and understands the importance of both impartiality and conflicts of interest and has in place a rigorous regime, backed up by regular internal audits, to ensure compliance with its own procedures whilst carrying out management system certification activities.

British Engineering Services activities are overseen by a Committee that is comprised of representatives of manufacturers, clients, users and independent organisations such as standards organisations, regulators or professional institutions to ensure impartiality and fairness.

Any complaints, disputes and appeals, both written and verbal, must be addressed to the Scheme Leader and are dealt with in accordance with a robust procedure contained within the British Engineering Services management system. This contains rigorous requirements on timescales, responsibilities and responses required.

Further information regarding the British Engineering Services Audit and Certifications processes including details of certificates granted, suspended and withdrawn can be obtained by application to the Scheme Leader.
