# IPS e.max® Ceram Selection

**IPS e.max® Ceram Selection offers new Enamel and Effect materials that will inspire professionals with their brilliant shades and impressive light optical properties.**

IPS e.max Ceram Selection comprises twelve materials that are especially designed to give professionals more room for creativity and individuality in the layering technique. The materials are used in combination with the existing IPS e.max Ceram materials and facilitate the creation of individualized characteristics - with the aim to achieve highly esthetic, natural looking restorations.

The renowned dental technicians Oliver Brix (Germany), August Bruguera (Spain) and Gérald Ubassy (France) have substantially shaped the concept on which IPS e.max Ceram Selection is based. The specially shaded materials and their application are the result of many years of successful work with IPS e.max Ceram.

The twelve shades are divided into three groups:
- Special Enamel – shaded Enamel materials
- Light Reflector – light reflecting Effect materials
- Light Absorber – light absorbing Effect materials

Made to create nature

Created from passion
and experience …

aqua citrine honey apricot quartz

… with the aim to copy nature
as closely as possible …

diamond silk fog

… and the aspiration
to share this knowledge.

salmon cream lavender taupe

# Special Enamel

The six Special Enamel materials are differently shaded Enamel materials that feature an enamel-like translucency.

# Light Reflector

The three Light Reflector materials are light reflecting Effect materials.

# Light Absorber

The three Light Absorber materials are light absorbing Effect materials.

*Natural effect*

Special Enamel

# aqua

Intensive Enamel material to enhance the translucent bluish effect along the incisal margins

Special Enamel

# citrine

Yellowish Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

Special Enamel

# honey

Honey-coloured Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

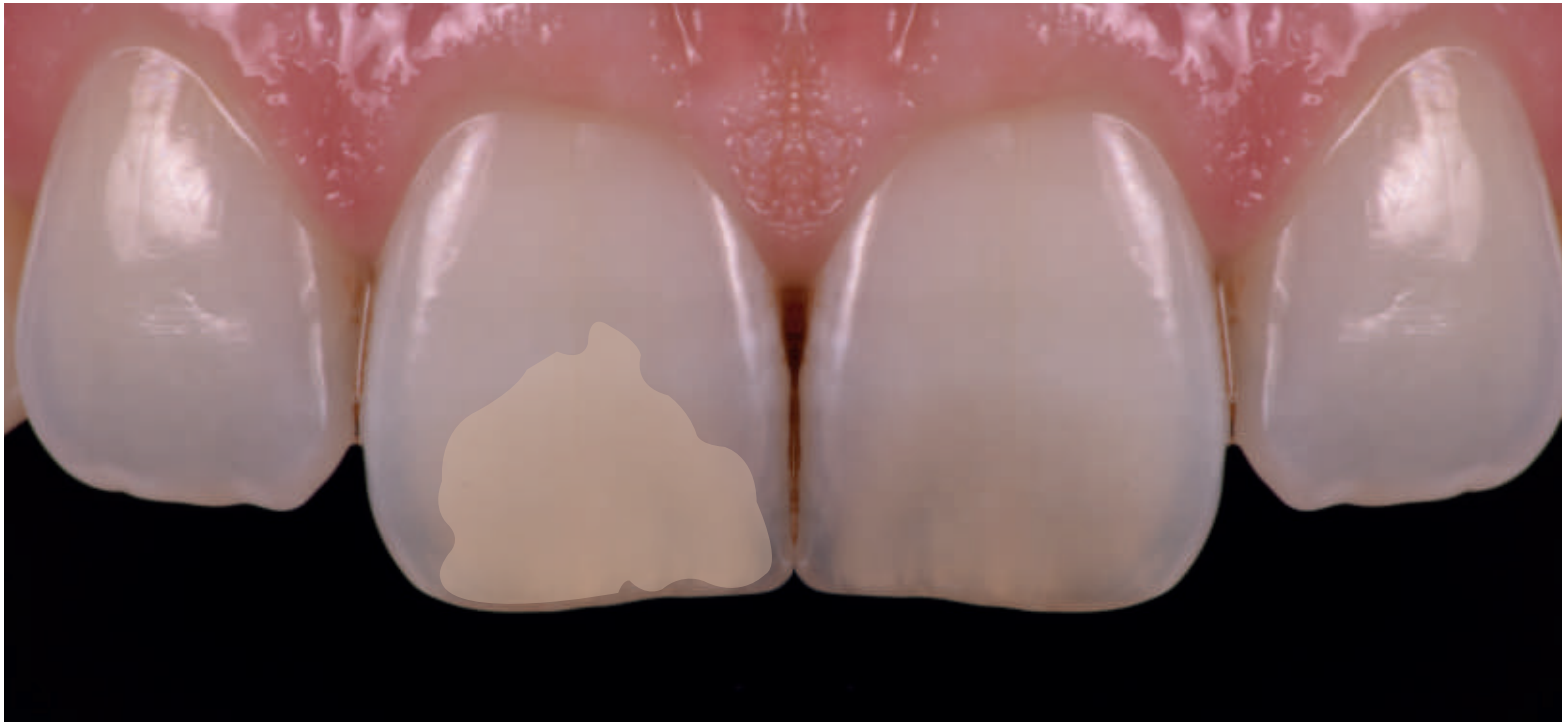

Special Enamel

# apricot

Apricot-coloured Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

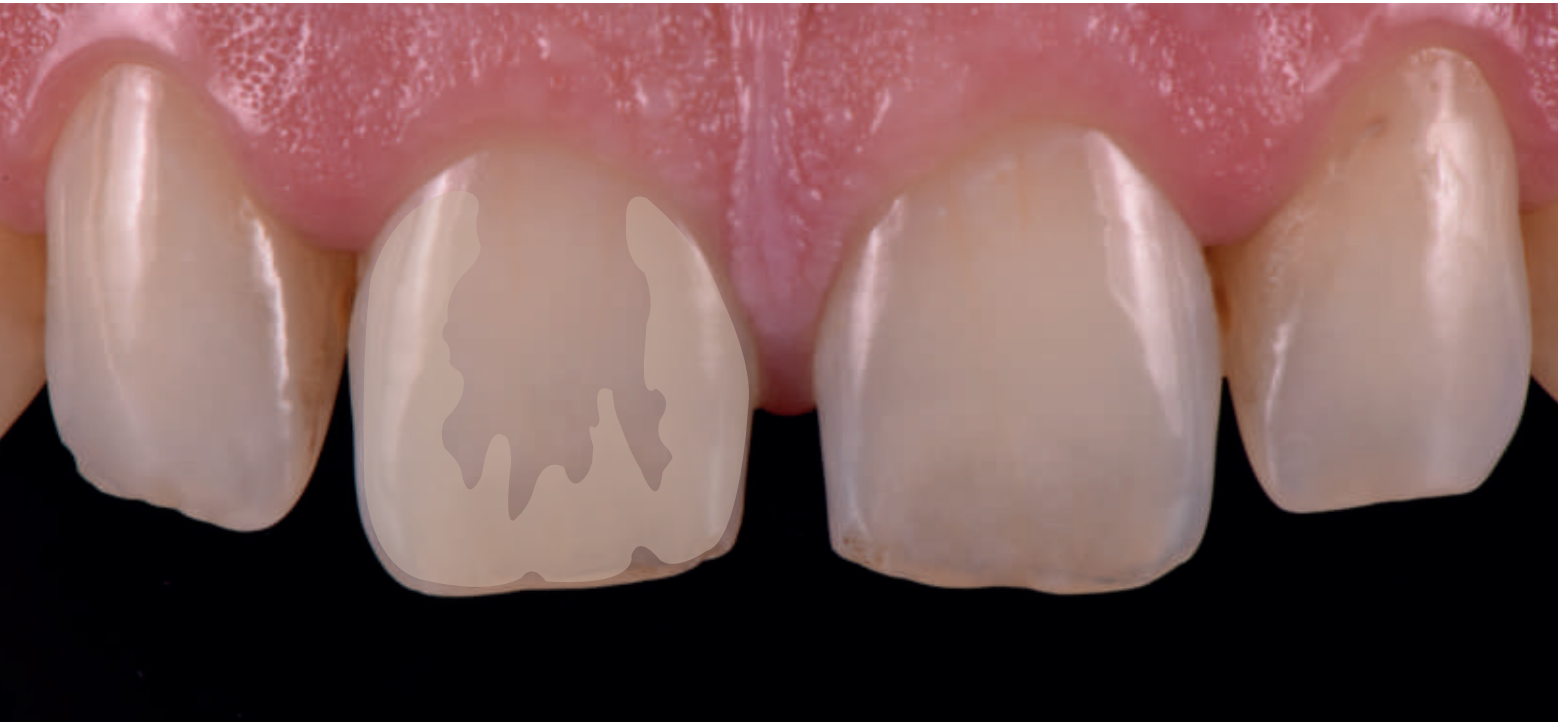

Special Enamel

# quartz

Warm grey Enamel material for adjusting the colour saturation and chroma and for giving accentuation to the incisal area

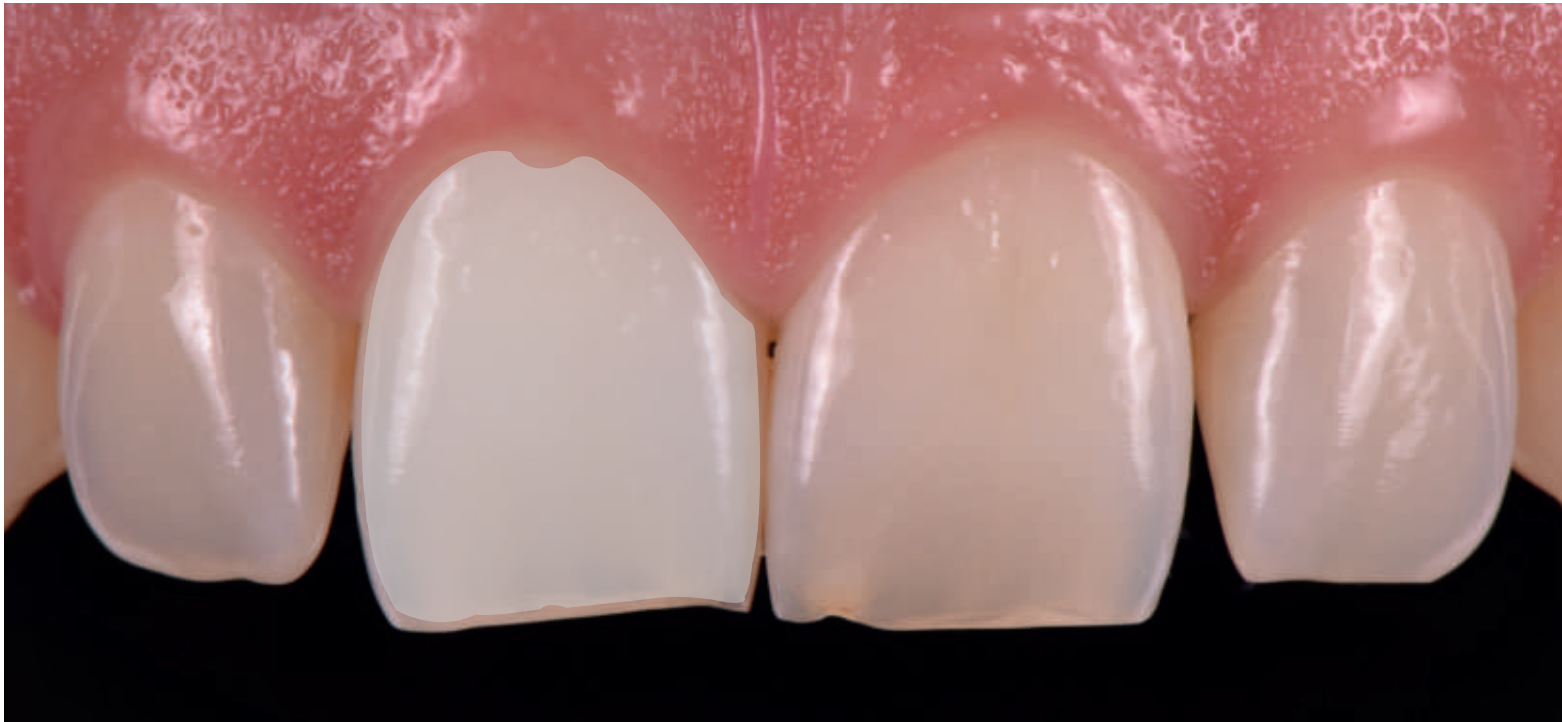

Special Enamel

# diamond

Shade-neutral universal Incisal material for the anterior region

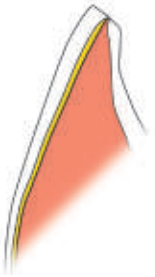

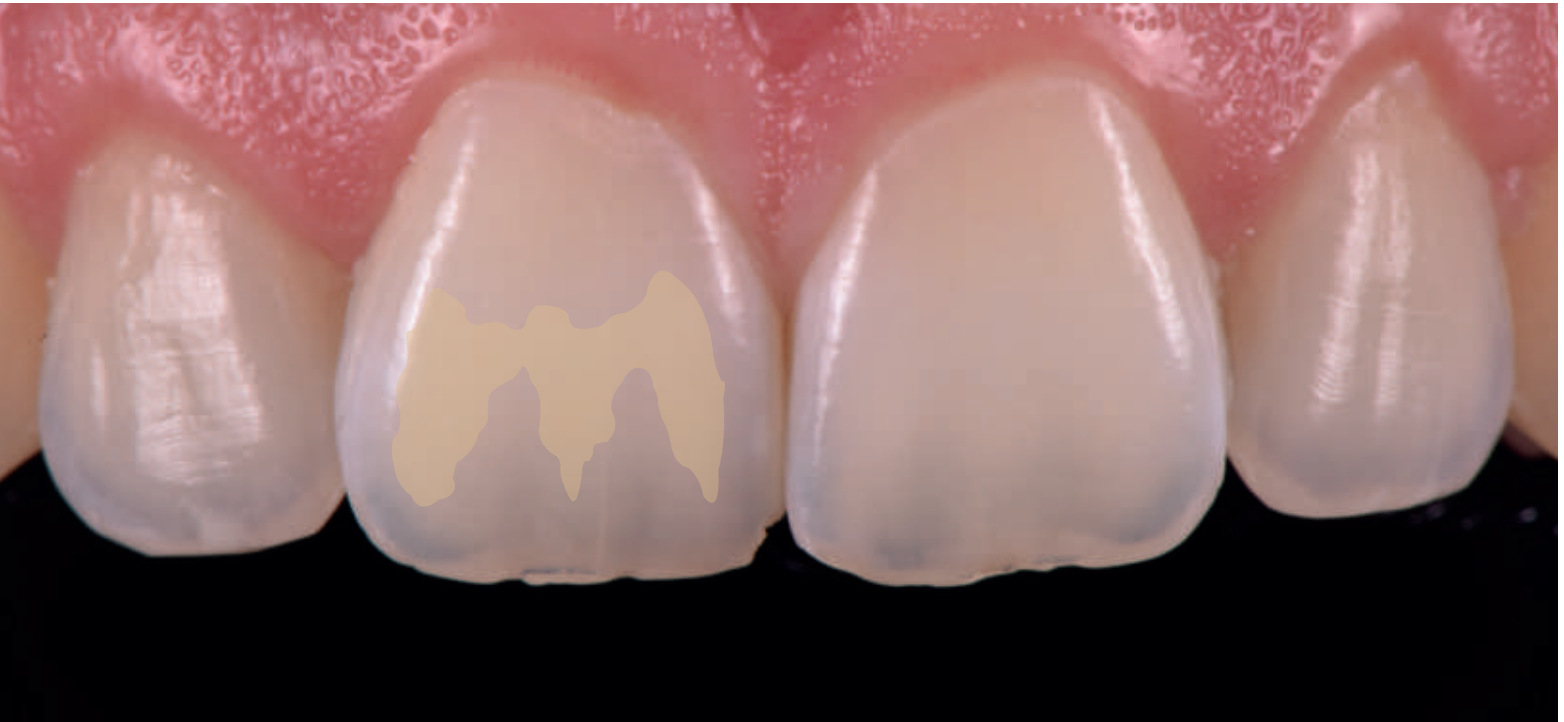

Light Reflector

# cream

Cream-coloured Effect material for reproducing colour reflecting areas in the cervical and incisal third

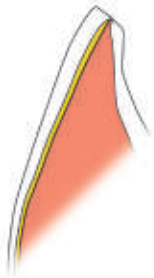

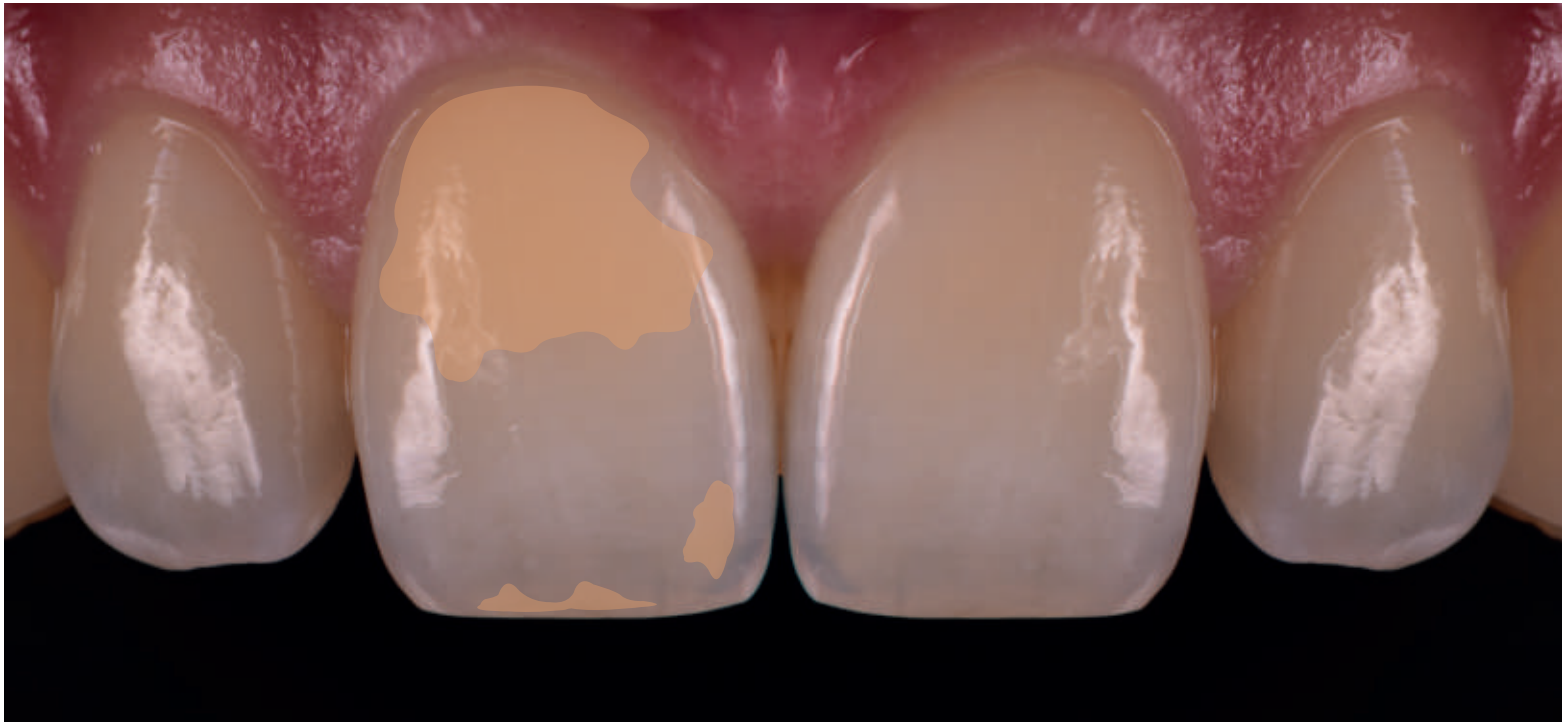

Light Reflector

# salmon

Salmon-coloured Effect material for reproducing colour reflecting areas in the cervical and incisal third

Light Reflector

# silk

Whitish Effect material for increasing the brightness value in the incisal area

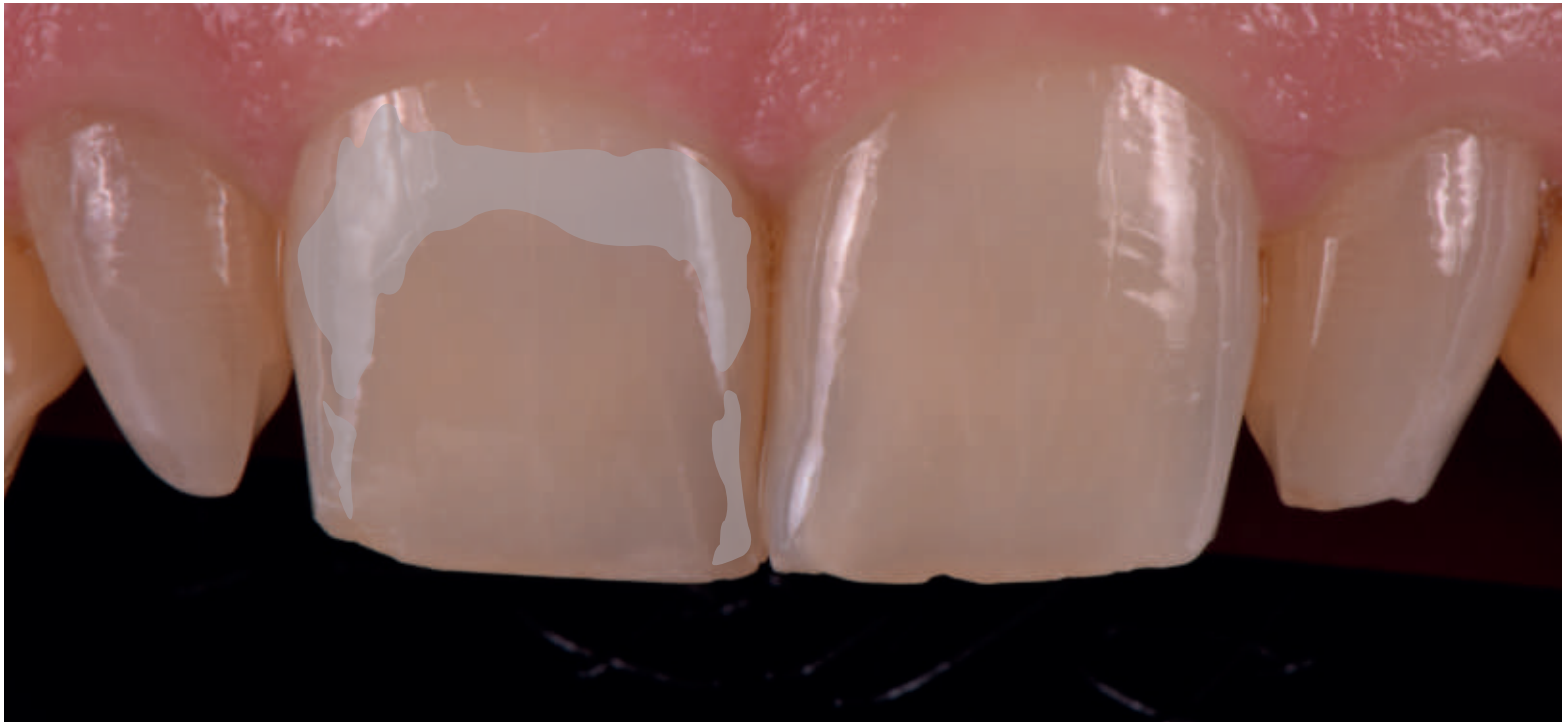

Light Absorber

# fog

Greyish Effect material for reducing the brightness value in the incisal area

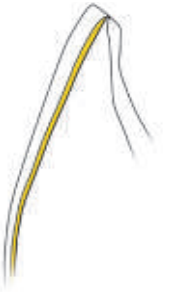

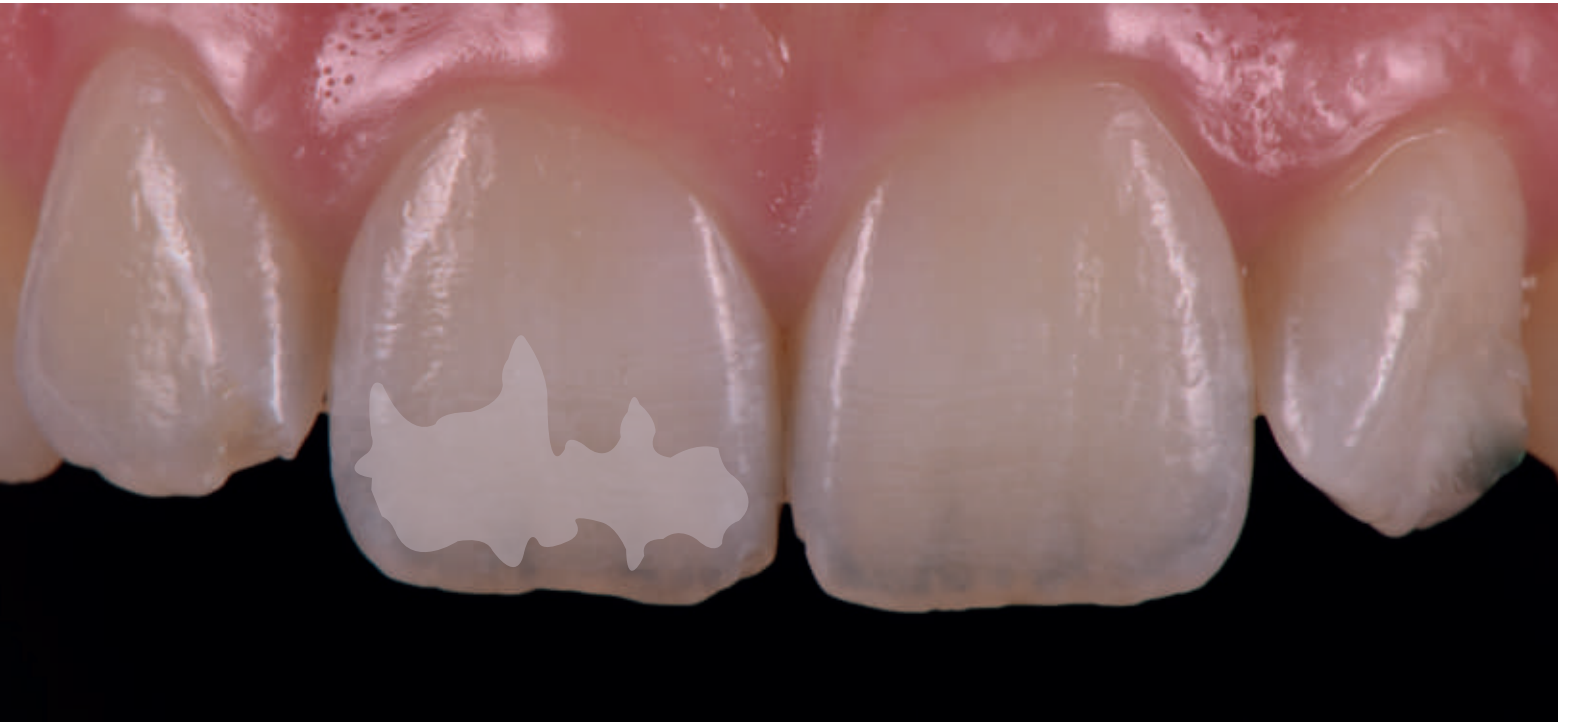

Light Absorber

# lavender

Lilac-coloured Effect material for creating absorption areas in the incisal and cervical third and in the proximal areas

Light Absorber

# taupe

Lilac-brown Effect material for creating absorption areas in the incisal and cervical third and along the proximal areas

# Delivery forms

## IPS e.max® Ceram Selection Kit

– IPS e.max Ceram Special Enamel, 1x 5 g of each shade: aqua, citrine, honey, apricot, quartz, diamond
– IPS e.max Ceram Light Reflector, 1x 5 g of each shade: cream, salmon, silk
– IPS e.max Ceram Light Absorber, 1x 5 g of each shade: fog, lavender, taupe

### Refills

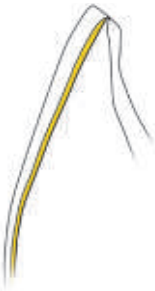

**IPS e.max Ceram Special Enamel, 1x 5 g**
Shades: aqua, citrine, honey, apricot, quartz, diamond

**IPS e.max Ceram Light Reflector, 1x 5 g**
Shades: cream, salmon, silk

**IPS e.max Ceram Light Absorber, 1x 5 g**
Shades: fog, lavender, taupe

all ceramic all you need
