

## Easily and Quickly Monitor Your Grounding Levels

The ground analyzer provides quick and accurate resistance measurements for industrial painting and coating applications.

### How It Works:

- Connect the ground wire to a verified system ground.
- Touch the probe to the part or carrier.
- The display will show a red, green or blue light to let you know how the resistance compares to your selected threshold.
- Touch probe to various positions on the substrate and carriers to know immediately if the grounding level is acceptable.

Comes with charger.  
Clip and attachment options are available.
