

Give Active Traders a Competitive Edge

Add technical indicators to your screener and alert engines with the ChartIQ Server Side Study Calculator.

ChartIQ's Server Side Study Calculator

Your end-users value technical indicators, which is why you've given them the most advanced charting on the market—but your screener only offers fundamentals. Now you can offer the full range of technical analysis from ChartIQ, including 125 technical indicators.

The Business Challenge

Even the most attentive trader misses opportunities when relying solely on charts. Solution: Build a server-side calculator into your screener to automatically monitor a universe of securities and allow end-users to search (or set up alerts) using technical indicator data.

An All-Inclusive, Complete Technical Analysis Platform.

DRIVE IDEA GENERATION

- Calculate study values.
- Build out search and alert functions.
- Empower active traders.

BUSINESS ADVANTAGES

The addition of the ChartIQ Server Side Study Calculator transforms your screener into a complete technical analysis platform. Run the complete ChartIQ suite of technical study algorithms on the server as well as on the chart.

END USER ADVANTAGE

Monitoring thousands of charts at once is impossible. Active traders can now enhance filtering using 125 technical studies (or use indicators to set up alerts) and catch more market opportunity than ever before.

TECHNICAL ADVANTAGES

Coding study algorithms manually is not only time consuming, it can result in inconsistencies between the chart and the server-side calculations. Our calculator combined with our charts ensures the data and the chart are aligned.

Enhance your screener. Impress your active traders.
