

The World's Most Powerful Charts.

A developer-friendly, financial visualization engine built for capital market data.

Finance, Visualized.

ChartIQ's Charting Library is a financial visualization platform that redefines the user experience for capital market institutions, investment banks, and retail brokerage firms around the world. Delivering the most intuitive data visualization and UI software, the Charting Library specializes in advanced technical analysis, trading configurations, and high-performance charting.

Go beyond traditional charts with custom visualizations. Our powerful client-side JavaScript libraries provide intuitiveness tradable data to engage customers.

Performance

- Our HTML5 toolkit delivers native application performance to all platforms and devices.
- The Charting Library was built from the ground-up (using the canvas, not SVG) and was designed to make adding interactive time series charts to your application or webpage, easy.
- We are unmatched by any competing technology.

Flexibility

- A single solution that simplifies the management of financial applications – regardless of language or framework - across web, mobile, and desktop.
- Integration is easy with our purpose-built SDK, injection API, extensive documentation, and U.S.-based customer support.
- No overhaul of your entire technology stack needed.

Built for Capital Markets

- Real-time market data, market sessions, trade execution, and technical analysis are just a few of the industry-specific needs that ChartIQ was designed to address.
- Accelerates time-to-market and offers the most sophisticated UI in finance.
- ChartIQ's Trade-from-Chart module works seamlessly across desktop, tablet and phone, so traders that place orders at their desk, can check, modify or replace orders from their mobile devices.

ChartIQ is the capital markets trusted vendor of choice for good reason. Chat or connect with us today. Visit chartiq.com or email us – info@chartiq.com

Developers

ChartIQ's HTML5 Charting Library was designed to make adding interactive time series charts to your application or webpage, easy. A powerful SDK allows for unlimited customization and ability to build advanced chart-based tools. ChartIQ's HTML5 Charting Library is pure JavaScript and runs entirely within the browser. Within minutes, software developers can integrate the charting library by using our "drop in" UI, then add and control charts programmatically with the SDK.

Product Managers

Most companies have at least one charting library for each platform they target – web, C#, Java, Android, iOS, etc. It's not just your users that suffer from a fragmented user experience – your developers have multiple code bases to maintain, let alone try to improve. With ChartIQ, you can replace all of your charting technologies – on desktop, web, mobile – with a single library to reduce the headaches for PMs and Developers. Give your users a consistent experience and your developers the time to spend on innovating, instead of trying to catch up.

Business

Financial charting for time series data is difficult and time consuming. It isn't practical or cost effective for development teams to build advanced financial charts from the ground up. Furthermore, a "standards based" solution that runs across multiple platforms, browsers, and devices adds additional layers of complexity. ChartIQ's HTML5 Charting Library provides this level of sophistication while lowering overall project costs and accelerating time-to-market. With less risk and expert knowledge, everyone builds with confidence and truly innovates.

Built by developers, for developers: whatever your requirements, ChartIQ can be used to build it.

What makes the ChartIQ's HTML5 Charting Library great?

- Intuitive SDK
- Modifies CSS to change style and colors
- Modifies behavior with a config object
- Passes market data in JSON
- Creates studies or drawing tools through inheritance
- Uses our "injection API" to tap into the kernel for advanced logic manipulation
- World class support will instructs, assist and provide sample code

ChartIQ builds powerful, lightweight financial applications that redefine the trading experience for capital market institutions and financial technology firms around the world. Learn more at chartiq.com.
