

INFRASTRUCTURE

Cloudbakers collaborates with you to innovate your infrastructure. Whether you are lifting and shifting, looking to move *and* improve your applications, or need a disaster recovery solution, Cloudbakers will consult, migrate, & support your initiative.

Top Drivers for Moving Your Infrastructure To the Cloud

- **Reduce costs** by closing the doors to your on-premise datacenter
- Update applications to run more **efficiently and reliably**
- **Automatically scale** during unanticipated times of demand
- Evolve to a **more secure environment**

Cloudbakers will focus on your most immediate need

Lift & Shift to pick up everything that's inside your current hypervisor and move it to Google Cloud Platform. Everything inside stays the same and only the location changes.

Move & Improve to modernize your infrastructure while you're transitioning. Reconfigure your setup to run on managed services, freeing you up to focus on your data and not your infrastructure.

Implement **Disaster Recovery** to have spare servers ready to go with an always up-to-date copy of your data. You only pay for instances when you need to spin them up, during a disaster.

Think about infrastructure as a take & bake pie:
