

### SAP Business Objects

SAP Business Objects business intelligence solutions redefine the way information empowers users, delivering insight through a single, trusted intelligence platform. By supporting a unified view of all information assets, they increase consistent analysis and informed decision-making across the organization.

Today's organizations are challenged to integrate and make sense of widespread, disparate data, enable collaborative team efforts, and optimize business performance across the entire organization and a dynamic network of partners. To optimize business performance and stay ahead of the competition, organizations must confront the gap between strategy and execution.

The nature of information is changing. It is no longer possible to manage your business using only structured information generated within four walls. All information, structured or unstructured, from inside or outside the organization, needs to be brought together in a way that is relevant for business decisions.

It is no longer sufficient for applications to support individual contributors within a functional silo. Your users need support for how they really get things done – collaborating in teams and communicating across departmental and geographic boundaries, all in a very specific business context.

Companies can no longer maintain arm's-length relationships with their customers and suppliers. Your company needs to optimize business performance across a dynamic network of partners with whom it is outsourcing, in-sourcing, off-shoring, and on-shoring. Such business networks empower your company to deliver faster innovation to customers at lower costs by sharing investments, assets, and ideas.

SAP Business Objects BI solutions provide an enterprise-wide information infrastructure that allows your organization to make every person, process, and decision more intelligent. With an intelligence platform, you can close the loop between information and action.

### SAP Crystal Reports

Turn information from almost any data source into a sophisticated, interactive report – easily – with SAP Crystal Reports. This powerful, user-friendly application for small businesses and departments can help you deliver key insights to the right decision maker, at the right time, in the right format.

#### Intuitive Design Environment

Design elegant reports quickly using a "what you see is what you get" (WYSIWYG) layout that offers popular design, integration, and deployment options.

- Use rich design tools to create the precise report layouts you need
- Reduce tedious report formatting efforts with templates and wizards
- Set parameter values and get results without refreshing data
- Explore results interactively with on-report sorting and filtering
- Set sorting and formatting to match local language customs

#### Design Acceleration Features

Reduce report design time with features such as global formula search, duplicate formula, duplicate running total, a "find-in-field" explorer, and more.

- Automatically create hyperlinks with the hyperlink wizard
- Generate barcodes quickly with a "turn to barcode" function
- Set report parameters and apply values from a single, easy-to-use parameter panel

#### Powerful Data Mash-Ups

Extend report design with powerful, integrated components, including dynamic charts, Adobe Flash, Adobe Flex, and SAP Crystal Dashboard Design visualizations.

- Be more productive with enhanced designer features
- Add dynamic charts, graphics, and videos to reports with Adobe Flash
- Visualize what-if scenarios with SAP Crystal Dashboard Design integration
- Execute business decisions within reports by embedding Adobe Flex

#### Comprehensive Deployment Options

Deploy and share reports in multiple ways, such as data driven publishing, new data access, comprehensive export options, and application development kits.

- Burst personalized reports to thousands of recipients with data-driven publishing
- Access interactive data over the Web using data drivers for enhanced Web services
- Easily access complete customer data with a salesforce.com driver
- Quickly integrate reports into business processes with improved XML exporting
- Add, change, or create new report objects at run-time with new SDK options

### SAP HANA

### SAP High Performance Analytic Appliance

SAP HANA allows you to analyze your business operations, using huge volumes of data, as business happens. Operational data is captured in-memory and external data can be easily added to provide you with insight from data across the entire organization.

Your organization can dramatically reduce hardware and maintenance costs associated with running multiple data warehouse, operational, and analytical systems. SAP HANA enables you to make better decisions, faster, by providing immediate access to relevant information with little need for help from IT.

### We're SAP Gold Partner

As the world's leading provider of business software\*, SAP delivers products and services that help accelerate business innovation for our customers. ### Elite Level Performance

As athletes move up levels – recreational – varsity – collegiate – minor league – professional – the speed of the game increases exponentially. This holds true in business as well: the larger and more dominant your business becomes, the fiercer the competition. To consistently win, you must be among the elite. And your systems and processes must support you in the quest for consistent, top-level performance. Your team must work together, synchronized, with clarity of communication. And the partners that support you must collaborate in the same manner.

At D1 Technologies, we provide our clients with a single, accountable team that supports your systems and software needs. We are your team to reach elite levels of performance and profitability.

### Payment Means Are One Click Away in SAP Business One!

By Patrick Burt Aug 27, 2018 3:33:26 PM

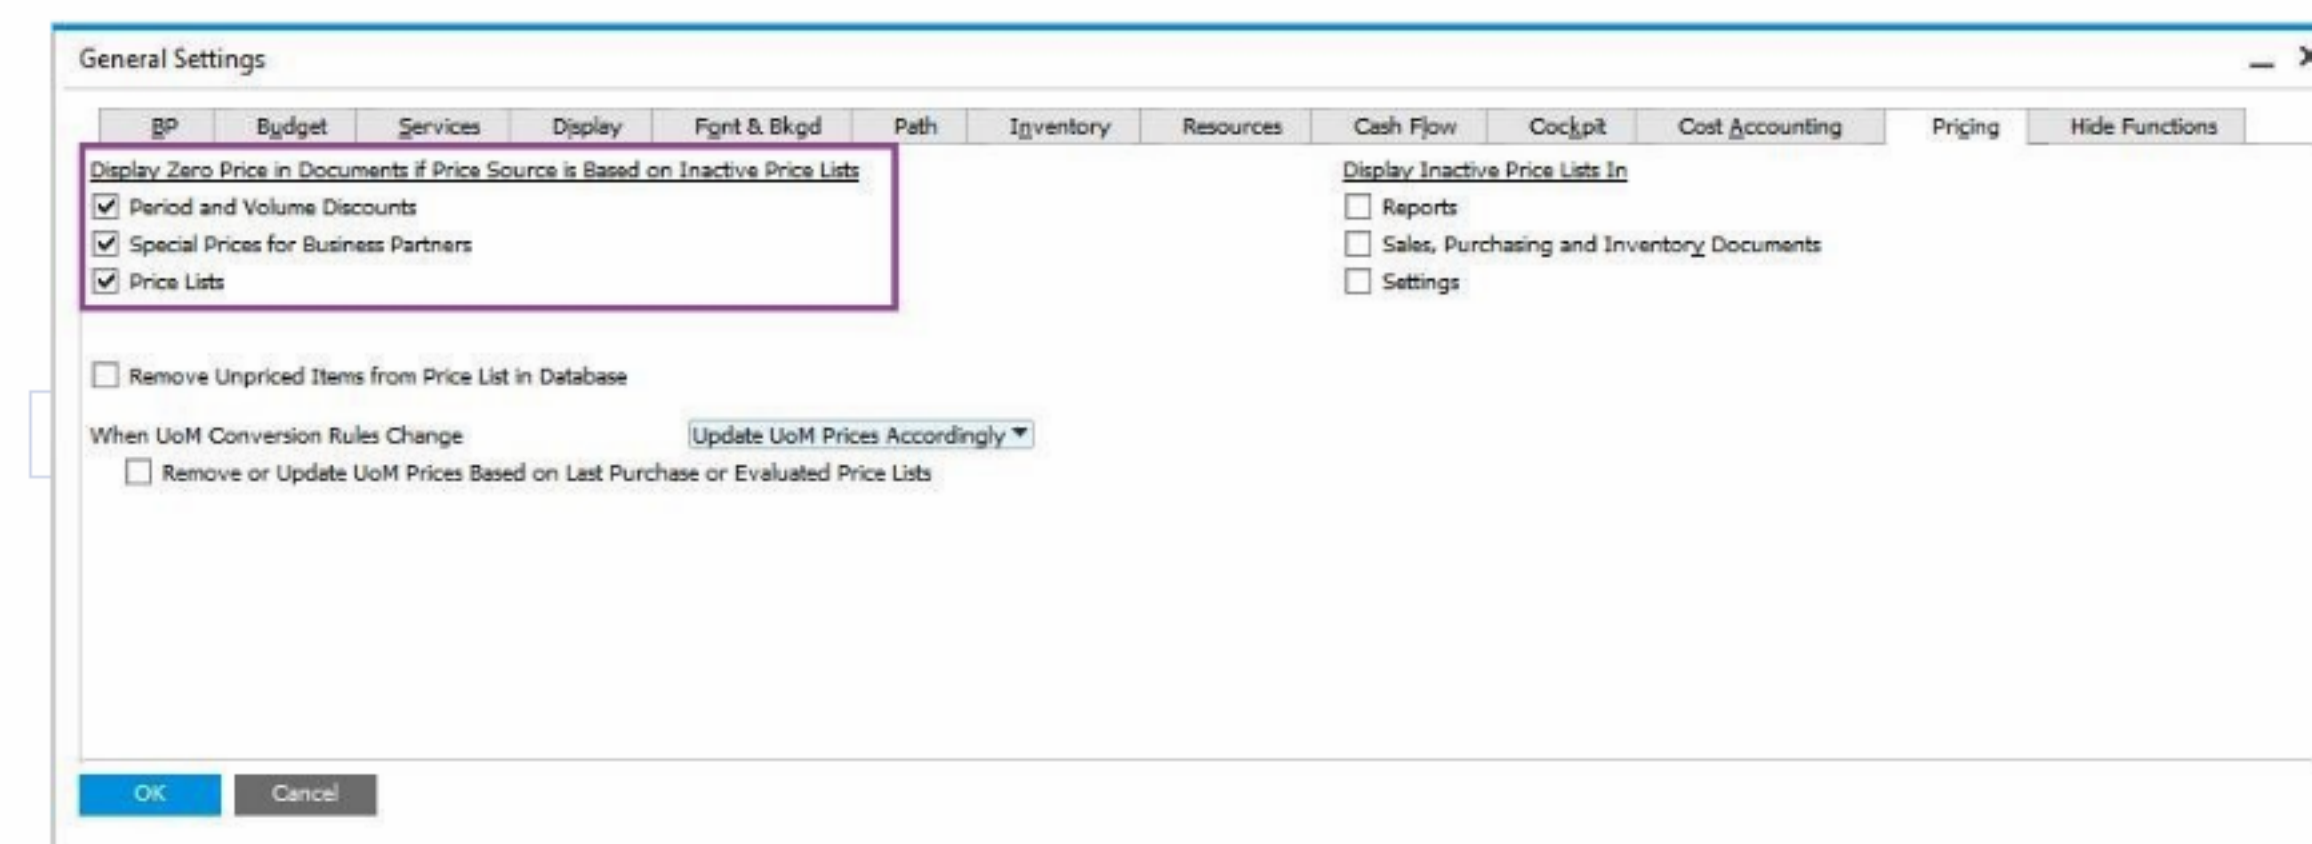

When new employee (who is also a user) joins the business, there are so many settings and preferences to be defined. Previously SAP Business One introduced the User Groups that enable to define groups of users and assign to each group the relevant set of authorizations. Authorizations play a key part in defining the user role and responsibilities but there are additional aspects as well. With the newly added enhancements, you can apply the relevant type to each group and define additional parameters:

### How to Show Zero Price for Inactive Price Lists in SAP Business One!

By Patrick Burt Aug 13, 2018 10:41:46 AM

Price lists represent our business in so many ways and like the business – they are dynamic and changing all the time. As pricing is a complicated and structured process, price lists can be defined with relevant dependencies, discounts and special prices on top. In such cases, any change in the source price list affects the whole chain. An example for such change is when price list is set to inactive and is not meant to be used. To verify that prices based on the inactive price list are not used, SAP Business One enables you to define that zero price will be displayed in documents instead of the price that is originally based on an inactive price list:
