

STL PostGIS Day 2019

Agile Development with
PostGIS & other OS Tools

USGS-NGTOC
Business Systems Team

Date: Nov 14, 2019

Scott Owens – Geographer / Project Manager
NGTOC - Business Systems

+ Challenges of transforming into an Agile team within a hierarchical government organization

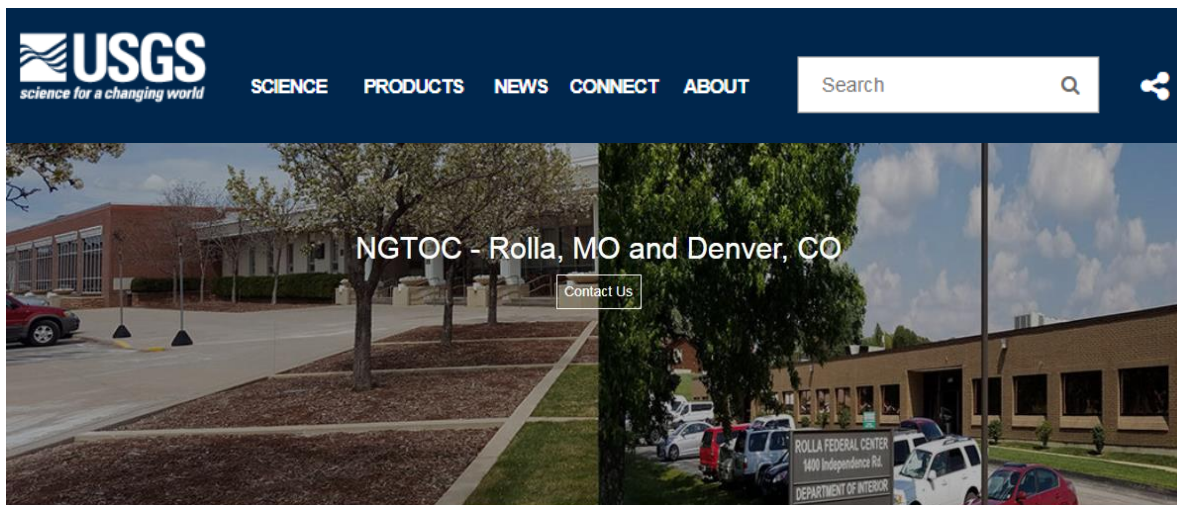

Agenda

- Intro
- Our Organizations Agile Transformation
 - Recognizing the problem(s)
 - Approval & implementation
- Our Team's Agile Journey
- Our Adoption of Open Source Solutions
 - Reasons
 - Examples of how we use PostgreSQL/PostGIS
- Q&A

The National Geospatial Technical Operations Center (NGTOC)

Mission Statement

"The U.S. Geological Survey - National Geospatial Technical Operations Center (NGTOC) provides leadership and world class technical expertise in the acquisition and management of trusted geospatial data, services, and map products for the Nation."

+

The National Geospatial Technical Operations Center (NGTOC)

Business Systems Team

4

"Provides business systems support to The National Map and business intelligence support to the National Geospatial Program."

+ Our Agile Transition

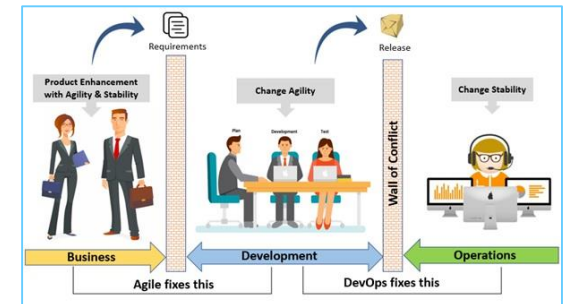

Drivers for Transformation

6

- Government Budgeting & Planning Process
 - Operates by a defined and deliberate schedule
 - Vague/general requirements
 - Limited flexibility
- Operations
 - Binned into silos
 - Multi-layer management structure
 - Difficulty in cross-department synchronization
- Development Teams
 - Limited resources to effectively manage work
 - Disruptive/unpredictable work schedule
 - Lack of cross-team communication

Ok, let's do it!

How do we make this work?

How we planned to make it work for us

HQ Schedule of Key Events

Annual Program
Planning

Quarterly
Program Review

Monthly Program
Review

- Dev teams divided by functional area
 - Mix of contractor & gov personnel
 - Each adopt Agile to fit their operations
- PM serves as “Scrum Master”
 - In many cases also as “pseudo” Product Owner
- Share knowledge and lessons learned
- Ensure & maintain transparency
 - JIRA, Project Pages, regular meetings
- Participate in annual planning

Our Team's Agile Journey

Business Systems Team – Launch Preparations

- Last of Seven Teams to go Agile
 - Waited for Project Manager to get hired and onboard
 - Allow the new PM flexibility to transform the team
- Hired the Project Manager (That's me)
 - Lead, coach, and develop the team
 - Apply Agile development methods
 - Interact with stakeholders, product and business owners
 - Ensure transparency
- The Team
 - 2 Government & 3 Contactor Developers
 - Responsible for 6 x major and 10 x minor products
 - Participated in initial Agile Mass Training

+ The Approach

Crawl, Walk...stumble a few times...then Sprint!

Configure  board, build backlog, set up schedules, start Scrum, we're off to Agile

Adoption of Open Source Solutions

Drivers for shifting to Open Source

- Innovative
 - Community of contributors constantly improving applications
 - Leverages proven best practices
 - Developers love it
- Supportable
 - Diverse and motivated support community on the Web
 - No vendor lock-in
- Costs
 - Increasing costs of Proprietary software and support
 - Decreasing budget

How We use Postgres/PostGIS

Two (but not exclusive) Use Cases

- Product Tracking System (PTS)
 - Purpose: Tracking and Reporting for Agreements, Task Orders, Data Processing and Publishing
 - Open Source Technology Stack: Spring, Leaflet, Geoserver, [PostgreSQL](#), [PostGIS](#)
 - Scheduled to be migrated to Django, Python, Leaflet, Geoserver, [PostgreSQL](#), [PostGIS](#)
- Specifications Explorer (Spec-X)
 - Purpose: Documents and provisions The National Map Specifications in a relational database to the public through a web interface
 - Open Source Technology Stack: Spring, Leaflet, Geoserver, [PostgreSQL](#), [PostGIS](#)
 - Scheduled to be migrated: to Django, Python, Leaflet, Geoserver, [PostgreSQL](#), [PostGIS](#)

Detailed Descriptions of Features

Attribute Definition

name	definition	datatype	allownull	precision	length	scale	scalevalue	defaultvalue	comments
Fcode	Numeric value that encodes a set of characteristics for a type of feature. The value has two parts: the first three digits encode the feature type, and the remaining digits encode values for a unique set of characteristics associated with the feature type. The set of characteristics may be single-valued or multi-valued.	150	True	0					default value varies, depending on feature

Summary

PostGIS is perfectly meeting our requirement

- Its easy to learn
- It's reliable
- It's powerful
- Has a great support network on the web
- No Vendor Lock!
