# ⦿ VIDIZMO

Recognized as a Challenger in Gartner's
2016 Enterprise Video Magic Quadrant

Digital Evidence Management

Built on Gartner-recognized Enterprise Video Content Management System, VIDIZMO Digital Evidence Management Solution enables law enforcement agencies to store, manage and analyze ever-increasing digital evidence collected from body-worn cameras, dashcams, CCTV cameras, phone call recordings, etc. -- all while observing the chain of custody requirements. Redaction provides necessary identity protection to comply with various laws such as Freedom of Information Act. Machine generated transcription converts spoken words into searchable and indexable text, thereby speeding up evidence processing by avoiding long delays involved in human translation.

Designed for Law Enforcement Agencies

Use of digital evidence has increased in past couple of decades as courts have allowed the use of various forms of digital records as evidence. Contemporary evidence types include electronic documents, mobile phone audio and video recordings, camera pictures, and video from various other sources such as CCTV, body cameras, law enforcement interviews, and more.

With the advent of body-worn camera evidence, prosecution agencies have been overwhelmed with increasing requirements for storing, transcribing, redacting, sharing and managing this mass amount of evidence. VIDIZMO Digital Evidence Management System comprehensively resolves all these challenges by providing a centralized repository to ingest evidence from any source to store, manage, transcribe, & sharing from a central location within a customer's Microsoft Azure Government Cloud or on-premises datacenters. The system also allows discovery access to prosecutors, defense attorneys, and courtroom evidence presentations.

Enterprise Video Streaming Solutions For All

PUBLIC SECTOR

LAW ENFORCEMENT

PUBLIC SAFETY & JUSTICE

INSURANCE

A secure and centralized Digital Evidence Management System that delivers video and digital media evidence on all devices, anywhere, anytime

Law enforcement agencies today have to deal with rapidly increasing volumes and types of digital evidence from myriad sources. To resolve issues with managing and utilizing all such evidence, VIDIZMO provides a Digital Evidence Management System that ensures timely and cost-efficient 360-degree management of all evidence in a consolidated platform.

- Ingests all forms digital evidence from any source or digital file formats
- Supports body-cam video, CCTV footage, phone recordings, images, docs, and more
- Processes it for playback on all devices
- Transcribes all videos to index them into searchable documents
- Redacts video to meet legal requirements
- Catalogs all digital evidence in case management system
- Integrates with your existing case management system
- Provides single sign-on authentication and integration with your IT systems
- Preserves original data and file integrity
- Automatically deletes media after expiration of file retention period
- Maintains audit logs
- Share all evidence with courts, defense attorneys, and other law enforcement agencies
- Supports chain of custody requirements

Unparalleled Speech & Vision Services

VIDIZMO uses Microsoft Azure Government Cloud & Azure Media Analytics to offer law enforcement agencies unparalleled platform scalability, security, storage, and media management services.

- Analyze evidence collected from body-cams, dash cams, and other devices using artificial intelligence technologies
- Provide identity protection by redacting video to comply with legal requirements
- Speed up investigations by extracting data from media and use it to build intelligent search indexes
- Investigate crime by processing video evidence collected from surveillance cameras at scale.
- Reduce false positives by conducting deep analysis of video snippets associated with motion events from surveillance cameras
- Generate a quick summary of surveillance footage by using Hyperlapse technology to smooth out time-lapse videos
- Observe chain of custody requirements during all operations

Government customers benefit from low startup costs, and little to zero cost and infrastructure ramping for big speech and vision processing workloads
