

# Network Managed Services

Monitoring and managing network systems are essential, but you can save more by outsourcing network management.

## In order to operate at peak efficiency, your network requires maintenance and upkeep.

Various infrastructure components such as firewalls, routers, switches and load balancers need to be monitored and managed to ensure they are working properly and not creating performance problems. However, watching online dashboards and dealing with false alarms is not an effective way to utilize your IT resources. That's why OneNeck managed services offers comprehensive network monitoring and management services.

Many organizations have come to understand that managing network infrastructure is a task that can be best left to third-party service providers, leaving in-house IT staff free to focus on more strategic business initiatives. OneNeck has a team of experienced network professionals to provide enterprise-wide monitoring and management of your network assets. Our dedicated team ensures that the backbone of your business continues to run smoothly. And OneNeck is there to provide ongoing support to meet your ever-growing computing demands.

OneNeck offers a wide range of network monitoring and managing services. We can create a network management strategy customized to meet your needs and your budget.

## Network Managed Services

Your business runs on your network. Poor network performance or a network failure is going to cost you money, which is why we provide the network managed services you need to keep your network running at peak efficiency.

OneNeck provides our customers with remote, enterprise-wide network management and monitoring. We assume full responsibility for day-to-day network operations and maintenance, freeing your IT team for more important initiatives that will meet core business needs.

Our portfolio of comprehensive network services includes:

- Network discovery and analysis
- Trouble reporting and resolution
- Trend usage analysis and capacity planning
- Network security management

We believe our customers need to focus on their business, not their network.

## Reduce Costs with Hosted and Managed Services

IT budgets are tight and getting tighter, so every dollar has to be justified, and every dollar saved counts even more. That means every IT activity has to be assessed and defensible before it can be funded.

When performing a cost comparison to satisfy decision-makers, we can help you demonstrate how OneNeck managed services will mean savings for your IT operations. We will not only save your budget but give you peace of mind.

---

## Why OneNeck for Network Management

OneNeck offers comprehensive network monitoring and management services. We have the expertise to remotely handle all your network monitoring, analysis, troubleshooting, and security needs.

There are many reasons to rely on OneNeck for your network management needs. Here are just a few to consider:

**Uptime SLAs** – OneNeck prides itself on providing reliable services. Our uptime SLAs are backed by security, power, and redundancy requirements that not only meet but exceed expectations. All of OneNeck's managed services offer high performance and high availability, and are financially backed SLAs.

**Flexibility on demand** – Our security and compliance services are fully customizable, tailored to meet specific business needs today, and changing business needs tomorrow.

**Frees up valuable in-house resources** – In-house IT resources are expensive, and are best used for strategic projects. OneNeck managed services relieves your IT team from handling routine maintenance and troubleshooting, leaving them free to focus on mission-critical initiatives.
