

Who is OneNeck® IT Solutions?

The one IT partner with the hybrid IT solutions to meet all your needs

With the ever-changing market conditions, you need an IT partner that can help you remain competitive.

You want operational agility and IT capabilities that keep pace with the rapidly changing business world. In today's computing environment, that means you need a hybrid IT solution.

Hybrid IT solutions will allow your business to:

- Deliver better customer service
- Create ongoing value
- Achieve sustainable growth

When choosing a hybrid IT solution, selecting the right integration strategy and technological approach can be much more complex. That's why you need an experienced partner who can help you sort it all out and demonstrate ways you can get more value from your current enterprise investment while harnessing the power of the cloud.

Consider the experienced team at OneNeck® IT Solutions.

Incorporating a hybrid IT solution is really about three things: hosting, hardware and services. OneNeck is a master of all three. Our team of experienced professionals can talk with you about where your applications and data belong. They will also explain ways your business can manage, access and secure them in order to maximize their value.

The experienced professionals at OneNeck are highly skilled in the following areas:

- **Cloud**— The cloud is a great resource. It can deliver added computing capacity and data storage when your business needs it most. Cloud services are also less expensive, more extensible and can grow with your operation. And because the cloud never sleeps, you can count on OneNeck for 24/7 support.
- **Managed services**— Having the proper IT environment is only half the battle. It takes experience, knowledge and expertise to maximize its benefit for your business. From managed applications to databases, networks and servers, our team can provide you with the support to get the most out of your investment.

- **Colocation**— OneNeck also offers colocation services as part of managed hosting. We maintain nine data centers that are strategically located around the country. In addition, ReliaCloud®— OneNeck's enterprise-class hosted infrastructure for resource-intensive applications — is available to support single-server to enterprise-scale needs. ReliaCloud offers outstanding application performance with zero downtime.
- **ERP application management**— As more companies integrate legacy enterprise systems with the cloud, Enterprise Resource Planning (ERP) becomes a critical business asset. Partnering with OneNeck for ERP and application management solutions ensures you get maximum performance and value. Whether your operating with a legacy system or looking to implement ERP for the first time, we take an agnostic approach and work with a portfolio of platforms to make sure you get a system that fits your needs today and well into the future.
- **Hardware and software**— Any network infrastructure is only as strong as its weakest link, which is why OneNeck only works with best-of-breed hardware and software vendors. Our clients depend on us to deliver superior solutions, which is why we go to great lengths to evaluate our hardware and software partners and become experts in their products.
- **Advanced services**— There are times when you have an IT project that is just too big to handle, you need additional expertise to get the job done or you want independent insight on how to get the greatest ROI and still plan for the future. OneNeck advanced services provides independent, unbiased evaluations and recommendations. Our experts help you assess, plan, migrate and build systems customized to meet your unique requirements.

- **Hybrid solutions**— No one IT approach meets all requirements, so every networking strategy is a hybrid. OneNeck has the resources and expertise to assemble the right balance of hardware, software and cloud resources to meet your needs. Every engagement starts with an assessment of your needs and an understanding of your objectives. We then develop a strategy that addresses your immediate needs while laying the groundwork for the future. OneNeck’s comprehensive set of hybrid solutions includes:
 - **Cloud**— We can extend any enterprise with cloud resources to provide linkable access to Backup as a Service, Disaster Recovery as a Service, Infrastructure as a Service and Platform as a Service.
 - **Collaboration**— Does your business count on world-class collaboration and telecommunications services that integrate voice, video, data and mobile? OneNeck builds custom systems that are ideal for conferencing, contact centers, digital media streaming and distribution, collaborative end points, messaging and unified communications services.
 - **Customer experience**— Doing business better only matters if your customers enjoy a positive experience. No one understands this better than OneNeck. We provide 24/7 online and telephone support, customer care tracking and business analytics to help your company improve and deliver an outstanding customer experience.
 - **Data center**— Keeping a data center up and running takes time, dedication and lots of resources. OneNeck knows this first-hand. From turnkey data center services to colocation, OneNeck can create your hybrid, high-availability environment in any of the purpose-built concurrently maintainable facilities we own and operate throughout the United States.
 - **End-user computing**— Today’s workforce is on the move and IT has to deliver secure data wherever employees are. Let OneNeck install and manage the hardware and software applications that give your employees the resources they need.

- **Managed hosting**— If you are looking for cloud computing resources OneNeck offers managed hosting services to meet any need, including application management, backup and recovery, database systems, servers and storage.
- **Mobility**— Employees use smartphones, tablets and laptops to stay connected 24/7. IT may be boosting business productivity, but it also means your business’ network infrastructure needs to provide secure data access. Ask OneNeck about options for extending up-to-date wireless networking capabilities.
- **Security**— Staying ahead of the latest security threats has become a full-time job for many IT professionals. At OneNeck, we make it our job to identify the security risks unique to your business and develop custom hybrid IT security solutions to defend your network.

The OneNeck Difference

OneNeck takes pride in being accountable. With OneNeck, you get a single point of contact — backed by a full team of professionals — who are on the job, around the clock, ready to meet your business-critical computing needs. Our team is responsive and truly focused on delivering the highest quality services.

As a company, OneNeck is committed to optimizing the performance of hybrid IT solutions, integrating cloud and delivering on-premises systems — from end-to-end. We collaborate with our customers to understand their business needs, not just their IT requirements. Then, we offer solutions that will grow with their operations.
