

# Navigate Evolving Technology with an Advanced Services Partner

An experienced Advanced Services partner can assist you with selecting the right hybrid IT solutions to drive positive business outcomes and enhance customer and workforce experiences. Here's how they do it, in any order, at a pace that matches your business objectives.

## Assess

By assessing your current environment, your Advanced Services partner can arm you with the information about your current environment and the specific recommendations you need to develop a sound IT strategy for the future, as well as optimize your current investment.

## Implement

Implementing your solution without compromising availability or performance can be a daunting task. An Advanced Services partner will help you integrate devices and new capabilities without disruption.

## Migrate

Underestimating what is involved in a "migration" can lead to higher costs, time and effort. Rely on an Advanced Services partner to develop a complete migration plan and execution strategy to move your complex environments to new data center facilities or cloud services.

## Support

Keeping an IT environment running smoothly requires constant attention and the availability of a highly skilled staff. An Advanced Services partner can help leveraging deep, specialized expertise to monitor and maintain your systems.

From network upgrades and expansions to complete system deployments, OneNeck can help you from start to finish. We have expertise in all phases of IT consulting and can implement a process that includes discovery, design, planning, implementation and support of hybrid IT solutions designed expressly for your needs.
