Private Domains for Complete Brand Control

Create a consistent brand message that you control for your entire survey project by using secure private domains for both your surveys and reports.

With Private Domains:

This: 🔒 surveygizmo.com/YourCompany/12345 ⟶ **Becomes This:** 🔒 survey.YourCompany.com

Private domains put your brand front and center for all your survey projects and data reporting.

They also come with an additional layer of security. Each includes an SSL (Secure Sockets Layer) certificate, the industry standard for keeping data that's passed between the web server and the browser totally private.

New SurveyGizmo Team Edition accounts include one private domain (and a corresponding SSL certificate), but you can add as many private domains as your projects require to any active SurveyGizmo account.

Contact an account manager today to learn about getting complete brand control over your surveys' domains.
