

VISIBILITY APPAREL

PRODUCT GUIDE & INFORMATION

Whether running heavy equipment on a construction site or repairing a pot hole on a federal highway, thousands of workers are exposed to potentially harmful working conditions every day. It is essential that these workers can always be seen to avoid serious or fatal injuries on the job. Red Kap® offers a variety of visibility apparel products, which meet American National Standards Institute (ANSI) standards, making workers not only safe, but compliant.

GLOSSARY OF TERMS AND DEFINITIONS

High Visibility Safety Apparel (HVSA) – Personal protective safety clothing intended to provide visibility during daytime, nighttime and other low-light conditions and meets the requirements of Performance Class 1, 2 or 3 as defined by ANSI/ISEA 107-2015 (High Visibility Safety Apparel and Accessories).

Enhanced Visibility Apparel – Garments designed to improve wearer's visibility but do not meet the requirements specified in ANSI/ISEA 107-2015 because they are made of materials that do not meet the performance requirements or they do not have retro-reflective striping for nighttime visibility.

Performance Class – A category of performance defined by the minimum area of background fabric and retro-reflective striping. Design specifications for each performance class correspond with the needs of the user in the expected risk environment.

Background Material* – Colored fluorescent material intended to be highly conspicuous, but not intended to comply with the requirements of ANSI 107 standard for retro-reflective material.

Retro-reflective Material* – Material that reflects and returns a relatively high proportion of light in a direction close to the direction from which it came.

Compliance – Garments and materials (background fabric, combined performance material and retro-reflective trim) shown to meet the requirements of ANSI/ISEA 107-2015.

Certification (Finished item) – Documentation from either a 3rd party certifier or the garment manufacturer demonstrating compliance with performance requirements set forth in ANSI/ISEA 107-2015. Manufacturers choosing self-certification must use the Declaration of Conformity provided in ANSI 107.

**As defined in ANSI/ISEA 107-2015, American National Standard for High-Visibility Safety Apparel and Accessories.*

INTRODUCTION TO THE ANSI HI-VISIBILITY STANDARD

The American National Standard for High-Visibility Safety Apparel and Accessories (ANSI/ISEA 107-2015) is a standard established by the American National Standards Institute. Construction, maintenance, utility, emergency responders, airport ramp personnel and many categories of off-road workers are routinely exposed to potential injury hazards from their low visibility while on the job.

This standard provides guidelines for the selection and use of high-visibility safety apparel and other high-visibility accessories to improve worker visibility during the day, in low-light conditions, and at night.

Private companies, as well as various federal, state, and local authorities have embraced ANSI/ISEA 107-compliant garments and accessories as useful PPE (Personal Protective Equipment) for workers exposed to struck-by hazards.

ANSI/ISEA 107-2015 specifies the following criteria must be met:

- **Performance requirements for background and combined-performance retro-reflective materials**
- **Photometric and physical performance requirements for retro-reflective and combined-performance materials**
- **Garment design**
- **Proper labeling**

FINAL RULE

The Final Rule, 23 CFR Part 634 Worker Visibility, was passed on November 18, 2006, and took effect on November 24, 2008.

The Rule states that all workers within a right-of-way of a Federal-aid highway who are exposed to traffic or to construction equipment within the work area shall wear High-Visibility apparel that must meet Performance Class 2 or Class 3 requirements of ANSI/ISEA 107-2015.

The Federal Register Final Rule and revised document of the 2009 Manual on Uniform Traffic Control Devices (MUTCD) was released on December 16, 2009.

The Rule states that mandatory use areas are expanded beyond Federal-aid highways and will require all workers on or near the roadway right-of-way to wear high visibility safety apparel that meets Performance Class 2 or 3 of ANSI 107-2004 or equivalent revisions. The Federal Highway Administration has issued a formal interpretation recognizing the 2015 edition of ANSI/ISEA 107 as meeting the requirements of 2009 MUTCD.

ULTRAVIOLET PROTECTION FACTOR (UPF) RATING

A relatively new rating designation for sun protective textiles and clothing is UPF (Ultraviolet Protection Factor). Unlike SPF (Sun Protection Factor) that measures only UVB, UPF measures both UVA and UVB.

Sun protective clothing is clothing specifically designed for sun protection and is produced from a fabric rated for its level of ultraviolet (UV) protection. Sun protective clothing may be pre-treated with UV inhibiting ingredients during manufacture to enhance UV blocking capacity.

BE SURE TO LOOK FOR THE UPF 40 ICON TO SEE WHICH RED KAP® PRODUCTS ARE MADE FROM FABRIC THAT CAN HELP PROTECT YOU FROM HARMFUL UV RAYS.

UPF Rating based upon testing performed on dry fabric, prelaundered. Test data available upon request.

RECENT CHANGES TO THE ANSI STANDARD

1 ANSI/ISEA 107 and ANSI/ISEA 207 have been combined into ANSI/ISEA 107-2015

- ANSI/ISEA 107 and ANSI/ISEA 207, *American National Standard for High-Visibility Public Safety Vests*, were merged to form a single document, ANSI/ISEA 107-2015. This new consolidated standard covers the needs of workers in all industries for high visibility garments as well as synchronizes the revision schedules for these two previously separate documents.

2 Allowance for small sized garments

- Garment performance classes are defined by minimum area requirements for both background material and retroreflective striping. Prior minimum requirements for background fabric prevented manufacturers from offering a true small-sized garment. The 2015 edition of ANSI/ISEA 107 includes a reduction in the minimum requirement for background fabric in only the smallest size garment offered by a manufacturer. This change will make small sized garments available to workers who previously were forced to wear garments that were too large for them in order to be compliant with the standard.

3 There has been an addition of garment types (O, R, and P) which address a wider range of occupations that should be in high visibility safety apparel.

4 NEW LABELING REQUIREMENTS

In addition to garment brand, size and care instructions, labels must carry these elements:

- A Must state that garment meets ANSI 107-2015

Must contain pictogram showing:

- B Garment Type (O, R or P)
- C Garment Performance Class
- D If the garment is not FR, must state "This garment is not flame resistant as defined by ANSI/ISEA 107-2015 Section 10.5"

- E Must indicate the maximum number of launderings for the finished item

NEW ANSI CLASSIFICATIONS

ANSI/ISEA 107-2015 Compliant Safety Garments are classified as follows:

TYPE O, CLASS 1 GARMENTS

Intended for use in environments where there are struck-by hazards from moving vehicles, equipment, & machinery not operating on public access rights of way or temporary traffic control zones.

- Parking/Service location workers
- Warehousing
- Oil & Gas extraction workers
- Refinery workers
- Mining

TYPE R, CLASS 2 GARMENTS

Intended for use by personnel exposed to vehicular traffic from public access rights of way or roadway temporary traffic control zones. Class 2 garments require the use of greater amounts of high-visibility materials which help distinguish between a human and an inanimate object.

- Forestry operations
- Ship cargo loading operations
- Roadway construction
- Utility and railway workers
- School crossing guards
- Delivery vehicle drivers
- High-volume parking and toll gate personnel
- Airport ground crews
- Trash collection and recycling operations

TYPE R, CLASS 3 GARMENTS

Intended for use by personnel exposed to vehicular traffic from public access rights of way or roadway temporary traffic control zones. Class 3 garments mandate an even higher standard of visibility for workers in moving, complex backgrounds.

- Roadway construction personnel and flaggers
- Utility workers
- Survey crews

TYPE P, CLASS 2 & 3 GARMENTS

Intended for emergency responders and law enforcement personnel in environments with struck-by hazards from traffic operating on public access rights of way or temporary traffic control zones.

- Police Officers
- Sheriff
- Fire responders
- EMS

SUPPLEMENTAL CLASS E GARMENTS

Pants, bib overalls, shorts and gaiters meeting minimum area requirements for background material and retroreflective trim. Class E apparel, however, cannot be worn alone to provide adequate visibility of workers. When Class E items are worn with Performance Class 2 or 3 apparel, the overall classification of the ensemble is Performance Class 3.

HI-VISIBILITY

APPAREL COLLECTION

THE **NEW** RED KAP® VISIBILITY LINE
FEATURING **RIPSTOP FABRIC** is
the **ONLY ANSI COMPLIANT 65%
POLYESTER / 35% COTTON** FABRIC
BLEND IN THE MARKET.

Industrial-friendly **RIPSTOP
FABRIC** is **75% STRONGER** than
other poplin workwear fabrics

Nearly **35% MORE BREATHABLE**

CUSTOMIZATION

BY IMAGINE IT!

VISIBILITY APPAREL CUSTOMIZATION

REFLECTIVE TRIM

There are several options and widths of reflective trim that can be selected for attachment to your garments. A few examples of how a work shirt, pant, or coverall can be transformed into an enhanced-visibility garment are provided on the next several pages.

SUGGESTED PLACEMENTS

To view additional images of stripe placements, go to vfimagewear.com. After logging in, click on the bar at the bottom of the screen that says "Reflective striping". Select the options to view individual locations or more stripe packages based on garment type. The stripe placements shown here replicate a few of these options.
