

# Security Awareness Advisor

Attackers have long known that it's far easier to hack (or dupe) the human behind the keyboard than to hack the computer. A successful breach of your environment allows an attacker to establish themselves undetected and slowly siphon off your valuable data, leading to ruined corporate reputations, financial losses or worse. Your people are your biggest vulnerability and biggest asset in the fight against cybersecurity threats, but how do you put them to work on the front lines to defend your organization?

## HOW?

It takes a combination of people, process, and technology to keep assets and data safe. IE's Security Awareness Advisor helps convert the largest attack surface in an organization, its people, from a vulnerability into a proactive defense mechanism by preparing employees for common threats they'll likely face, such as Phishing, Man-in-the-Middle, and Water Cooler attacks. More importantly, we'll work to instill a sense of ownership and security integration into your culture.

By remaining vendor agnostic, aligned to your organization's security controls and policies, and focusing on the areas of highest risk, our training engagement helps you protect your people and assets, secure data, and fulfill compliance requirements.

### Security Awareness Advisor Benefits

#### Strengthened security posture

Train users to become your first line of defense rather than the first point of exposure

#### Security-oriented corporate culture

IE Security Awareness Advisor helps instill a sense of cultural responsibility around data protection by tailoring the content around your organization's policies, procedures, and culture

#### Easy to understand for higher retention

IE Security Awareness Advisor is delivered using common language, examples, and terms to ensure audience comprehension which is key to any successful security awareness program

people connecting people

**INTERNETWORK  
ENGINEERING**

IE's Security Awareness Advisor is an instructor-led educational training session aimed at enhancing the awareness, appreciation, and responsibility of your organization's employees in helping protect not only themselves but your organization's reputation, data, and other assets.

## What's the process?

### ✓ Culture and Content Interview

IE Consultants conduct a short interview with project sponsors to better understand the corporate culture and determine how best to present content for maximum attention and retention.

### ✓ Schedule Sessions

IE Consultants will work with project sponsors to identify participants and generate an invitation or announcement of up to five training sessions.

### ✓ Training Sessions

IE encourages in-person security awareness training attendance, however, virtual attendance via WebEx can also be arranged. Optional phishing campaigns before and after training are also available.

### ✓ Executive Presentation

At the conclusion of the engagement, IE will present and discuss organizational observations regarding employee participation, comprehension, and engagement.

## What types of organizations are benefiting?

Our Security Awareness Advisor is helping companies that desire to:

Shift their security strategy from reactive to proactive

Enable smart security spending

Align their security program to actual risks and threats

## Deliverables include:

- **Advisor Report** – The Advisor Report summarizes session logistics, list of attendees, content delivered, and information that helps satisfy regulatory compliance obligations.
- **Training Collateral** – All materials used by IE to deliver the content will be provided for future use and/or reference.
- **Certificate of Completion** – Each participant will receive a certificate of completion to indicate successfully attending the training session(s).

Although security awareness is an important part of an overall security strategy, there are other critical components that need to be addressed. Are you confident your most important assets are protected? Have you found it challenging to build and maintain a successful vulnerability management practice? If you're struggling with these or other security and compliance related questions, ask about our wide variety of security services and products designed to help you detect, contain and control the latest security threats. Regardless of your current security capabilities, IE can enhance your security posture Everywhere, Any Way.
