

# Securing Our Schools: A Scalable Video Surveillance System

Wachter designs a modern solution to enhance existing surveillance investments

## The Customer

Wachter's Client is a **nationally-ranked suburban public school district** located in one of New Jersey's most populous counties.

The district includes 18 schools, each equipped with video surveillance capabilities.

## Industry

Education

## Location

Northern New Jersey

## Duration

Two weeks, after classes  
(Nights / Evenings)

## Services

- IP HDTV CCTV
- Real-time hall monitoring
- Incident footage retrieval
- Entrance / exit monitoring

## The Challenge

The district wanted to add to its existing video surveillance system as part of its' security solutions for schools and administrative buildings.

The solution needed to leverage the latest in technology while providing enhanced video coverage and usability.

To avoid interruption to teaching and work schedules, installation needed to take place after hours, and in a compressed two-week timeframe.

## The Solution

Wachter designed an expandable physical security solution to address the district's needs.

To better protect students and employees, the new system provides additional views of halls, lockers, and doors.

And Wachter integrated everything with the client's existing VMS and camera components, providing the highest quality HD IP video.

## The Results

The new system was installed on-time and within budget, providing a new level of safety and security for both the students and the faculty at each building.
