

The right tools are essential for proper database management. Without them, you could be spending more than you need, exposing yourself to unnecessary risk, or affecting the performance of your entire business.

Having a well-maintained database environment is a necessity for any organisation today. dbWatch helps DBAs to monitor and manage server setups of any size in any location, providing you with the tools to take total control over every aspect of your servers.

## A Complete All-In-One Solution

dbWatch is the only tool that DBAs need for monitoring and managing their server systems. Combining enterprise-class security, scalability and a suite of powerful tools, dbWatch can replace multiple other solutions.

### DATABASE MONITORING

Powerful monitoring solutions are crucial for any DBA team. Monitoring allows you to spot and avoid upcoming issues, it will help you to stay on top of your licences resource management, and reporting:

- 24/7 proactive monitoring

- Automated fully customisable report production

- Database task scheduling

- Resource and performance monitoring

- A simple, easy-to-use interface

- One tool for all your needs, saving time and money

- Agentless for fast and trouble-free installation and operation

# DATABASE MANAGEMENT

dbWatch gives DBAs control over their entire server system. From system-wide changes to instance-specific adjustments, these tools allow control over maintenance, security, performance and productivity.

- **Automated database maintenance tasks**

- **Total control over every instance and server**

- **Customisable role-based access controls**

- **Automated and proactive monitoring and maintenance**

- **AD, Kerberos, encryption and custom certificate support**

## SCALABILITY AND COMPATIBILITY

The modern world runs on data, and businesses are using more servers than ever to keep up.

dbWatch has been designed to work with thousands of instances at once, supporting even the largest data-driven businesses and organisations. A wide range of platforms and versions are supported too, including Microsoft SQL Server, Azure, Oracle, PostgreSQL, MySQL, MariaDB and Sybase.

## ABOUT DBWATCH

dbWatch was founded in 2001 by leading database experts in Oslo, Norway.

We have made it our mission to develop and deliver the best possible solutions for complete and total database management and monitoring. Working with customers around the world, we have combined our programming expertise and DBA experience to produce dbWatch - the best all-in-one database solution on the market.
