# Database Monitoring and Reporting

Put deep insight and total control at your fingertips with dbWatch - the complete database monitoring solution.

Capable of monitoring thousands of instances at once across SQL Server, Oracle, MySQL, Azure and more, dbWatch gives DBAs the tools they need to track issues, make changes, and keep your system running smoothly.

With 24/7 monitoring, automated reporting, easily configurable alarms and schedules, plus performance and resource monitoring too, dbWatch combines a full suite of tools into one solution.

dbWatch analyze and track licence usage, allowing you to optimize license cost and avoid costly surprises.

dbWatch presents all of your data in one simple-to-use overview, giving your DBAs a quick and clear snapshot of server health. DBAs can use dbWatch to drill deeper into your system using the same tools, giving you health and performance information on your entire system and each individual instance.

Our dbWatch monitoring solution has been designed from the ground up to give DBAs a total overview of their entire system, alongside deep insight into every individual server and instance.
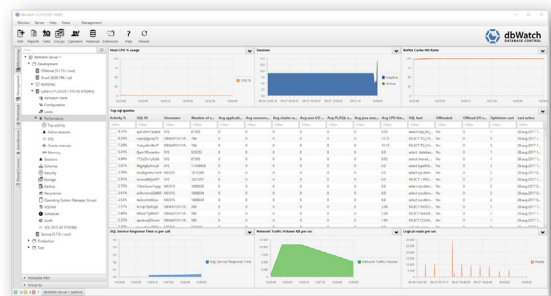

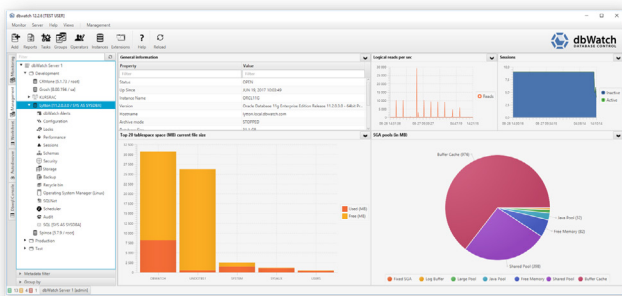

dbWatch puts control of your database firmly in your hands. With the right tools, DBAs can quickly and efficiently tackle issues, make plans for the future, and guarantee the health of your entire IT system.

FEATURES AND BENEFITS

Whatever industry you work in, and however many servers you operate, dbWatch has the tools you need for total control and peace of mind:

- 24/7 proactive instance monitoring

- Scales up to monitor and manage thousands of instances

- Automated fully customisable report production

- Database task scheduling

- Multi-platform support, including MS SQL Server, Oracle and Azure

- Fully customizable tasks, reports and interfaces

- Resource and performance monitoring

- A simple, easy-to-use and customisable interface

- One tool for all your needs, saving time and money

- Agentless for fast and trouble-free installation and operation

Our database management tools provide benefits to your wider business as well, cutting costs and saving time. Licence and performance monitoring can help you to save money on software and hardware costs, alerts and reports can help you to spot and correct issues, and automation can save your DBAs time on day-to-day tasks.
