

# A Force Multiplier for Third-Party Cyber Risk Management

CyberGRX brings efficiency, scalability and accuracy to third-party programs across the globe. The CyberGRX Exchange is a central hub where enterprises and third parties can easily access, order and share dynamic, risk-based assessments. CyberGRX assessments are offered as a managed service, in three tiers, covering low and high risk third parties and include a corresponding level of validation. CyberGRX's dynamic assessments and advanced analytics provide you with an up-to-date view of risk for continuous monitoring and mitigation insights.

## What We Do

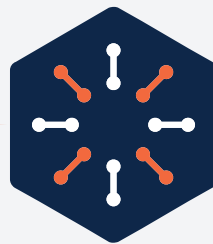

Innovative software that supports the TPCRM journey

- Dynamic, up to date assessments managed as an end to end service
- Based on NIST 800-53 and ISO 27001 frameworks
- 3 tiers of dynamic, validated assessments
- Residual risk insights help prioritize remediation efforts with the most yield

### Enterprises

Enterprises can easily browse and order assessments to quickly identify your riskiest vendors.

**Global Cyber Risk  
Information Exchange**

### Third Parties

Third Parties can fill in one standardized assessment, and share it upstream with many partners.

## Advanced Analytics

- Ongoing Monitoring
- Actionable Insights
- Risk Based Approach

## What it Means for You

### Enterprises

Identify the third parties that pose you the greatest risk  
Create a prioritized risk-based mitigation strategy  
Continuously monitor your ecosystem  
Create a scalable program that can accommodate your entire ecosystem  
Evolve your team from data collectors to risk managers

### Third Parties

Never complete another shared spreadsheet again  
Identify the remediation with the most yield  
Fill in one assessment, and share it with as many upstream partners as you like  
Drive business growth by demonstrating your proactive engagement with your security posture
