FalconXT and StorLogix

Unprecedented Access Control

The pairing of the FalconXT system controller and StorLogix software provides the foundation for the facility's access control, site security, and facility management. With features that range from basic to advanced and flexible programming capabilities, owners and managers can configure a tailored solution for the facility. Start as simple or as sophisticated as the business requires and expand functionality as the operation grows.

Boost profits, attract tenants

Together, the FalconXT controller and StorLogix software form the ideal solution that is:

- Highly flexible and customizable, providing the power to tailor an optimal system to each facility's requirements.
- Designed to grow with the business, whether it's a single-site operator or a large corporation with multiple sites.
- Based on the most advanced technology available, utilizing a stable software platform.

Discover how the FalconXT controller and StorLogix software can help protect your investment, boost profits, and create a sense of security for your customers.
System Features

- Hundreds of customizable system messages.
- E-mail alert communications.
- Support for as many as 10,000 units and 10,000 users.
- Connectivity with more than 125 access devices.
- Badge printing and photo ID capabilities.
- Battery backup for uninterrupted system control.

Integrated Solutions

Products and services from PTI Security Systems can be configured to address every facility's unique requirements. Expand on the value of the FalconXT controller and StorLogix software with:

- Wireless door alarms, to further illustrate the exact status of every door in the facility.
- Gate operators, to automate entry and exit, control traffic flow, and provide authorized access.
- SiteGraphics, for at-a-glance visibility to the status of the site for the manager and an enhanced perception of the facility by the customer.

SECURITY, ACCESS : CONTROL

PTI
SECURITY SYSTEMS

Capabilities

- On-board Ethernet, USB and RS-232 connectivity.
- Storage of up to 40,000 events in safe, non-volatile memory.
- Two industry standard Wiegand inputs.
- 12V DC power supply on board with battery backup.
- Hundreds of configurable access levels and time schedules.
- LogixScript capabilities for the ultimate in configuration options.
- Thousands of flexible input and output points for end-to-end solutions.

Benefits

The pairing of the FalconXT system controller and StorLogix software produces an advanced system for access control. Systems can include keypads with magnetic card swipes, proximity cards, or wireless remote controls. Events and alarms are electronically logged for review and alarms can be interfaced with other systems.

The FalconXT system controller (Model #PXTBUUET825P) integrates all functions for securing and monitoring the facility. It supports as many as 125 RS485 devices, eight supervised inputs, two industry standard Wiegand devices, and four dry-contact relays. An on-board Ethernet connection provides TCP/IP communication with a host computer.

StorLogix software (Model #PSLSWSTD01.00.0) is a Windows®-based solution that is fully integrated with the FalconXT system controller as an easy-to-use configuration and management tool. The intuitive graphical software facilitates the setup process for access areas and times, monitoring zones, alarms, and video monitoring. Establish facility capabilities using an office computer or remote PC connected by VPN. StorLogix interfaces with many industry standard management software packages to save you time and money.

Technical Specifications

No other controller solution provides the level of flexibility, integration, and scalability that is available with the FalconXT and StorLogix combination.

FalconXT (Model #PXTBUUET825P)

Max AI Devices	126
Connectivity (PC)	RS-232, USB, TCP/IP
Connectivity (AI Device)	RS-485, 900 MHz Wireless
Board I/O	2 Wiegand devices, 8 Inputs, 4 Relays

StorLogix (Model #PSLSWSTD01.00.0)

Units/Users	10,000/10,000
Custom Messages	700
User/System E-mail Alerts	Included
Communications	RS-232, RS-485, RS-422, TCP/IP, USB, 900 MHz two-way wireless
