

VANCORD

Threat Modeling

Vancord assumes the role of an attacker, analyzing vulnerability data to identify the most relevant threats faced by high-value organizational assets and likely attack vectors. Threat models help organizations to understand potential impact to business processes, systems, and data.

SERVICE OFFERING

Benefits

- Discover security gaps before they're abused
- Prioritization of how threats can attack a business
- Trusted partner for security assessment & implementation
- Provide security guidance & documentation
- Provide data protection (CIA)

Deliverables

- Attack paths of note for business-critical resources
- Impact analyses for each critical resource if attack is successful
- Assessment of current security controls and possible countermeasures for hypothetical attacks
- Staff training & education
