## **Sediment Interceptor Operation and Maintenance**

These Sediment interceptors are manual type interceptors, there are no moving parts.

Maintenance personnel must periodically open up the interceptor on the top and manually take out the removable basket and remove any debris that has accumulate in these units.

We cannot tell you how often that this must be done. Some jobs require that this be done hourly, daily or weekly.

Failure to do this will cause stoppages and system failure.

Care must be taken not to damage fittings on the interceptor and the interceptor themselves.

If anyone has any questions please don't hesitate to contact us.
