

MAXIMIZING OPERATIONAL EFFICIENCY

Want to increase your wrench time by 25%?

Want to increase your equipment uptime by 10%?

Want to increase your first call resolution by 25%?

The Business Challenge

You need to take costs out of your business by increasing your asset and operational uptime while maximizing maintenance productivity.

Results from a Recent EPRI (Electric Power Reliability Institute) Report

Less than a third of a maintenance worker's time is spent actually doing repairs due to: non-existent/erroneous information, unavailable/incorrect spare parts, and undocumented maintenance procedures. This results in decreased productivity, reduced asset uptime, sub-par operational efficiency, and increased operational costs.

The Solution

Utopia will ensure that you have the right equipment, in the right location, with the right spare parts. We can couple this with maintenance plans and other critical master data to enable your organization to operate at peak performance.

Utopia's unique solution combines 18 years of industry know-how, a rich reference library, cutting-edge data collection, and Machine Learning to deliver high-quality results in extremely short timeframes.

Recent Successes

- **Global Manufacturer** rationalized, categorized, and mastered 34M Item Master records across 104 sites into one useable reference system
- **Major Utility** decreased an already-running 12-year Asset Information Cleansing program down to <2 years
- **Super-Major Oil & Gas Company** gained full visibility of their MRO-related operations across all 14 subsidiaries for the first time ever
