Globally Leading Footwear and Apparel Company

Perfect Data. Perfectly Possible®

Customer Success Story: Globally Leading Footwear and Apparel Company

Utopia Solutions Resulted in More Accurate Supply Chain Forecasting, Accelerated Speed of Business, Accurate Reporting & Resource Efficiencies

Customer Situation

This large, globally leading footwear and apparel company engages in the design, development, marketing, and sale of sports and lifestyle footwear, apparel, and equipment, accessories and services. Its athletic footwear products are designed primarily for specific athletic use, although a large percentage of the products are worn for casual or leisure purposes. The company is in the process of transforming itself and the digital core upon which it relies and runs its business. The SAP Fashion Management Solution is a critical component of that and instilling a culture where data has value is an important aspect. To that end, company executives pushed for data quality and data governance to be elevated to a strategically important level. The company recognizes that a solid article master data foundation is a key requirement for achieving the potential benefits of S/4HANA.

Solution

- Implementation of **SAP Master Data Governance retail and fashion management solution extension by Utopia**, integrated with the SAP Fashion Management Solution (FMS) to ensure the continued accuracy of article master data loaded into FMS and other systems using native syndication capabilities of SAP MDG
- Utilization of SAP Information Steward (SAP IS)
- Utilization of SAP Data Services (SAP DS)

Realized and Expected Benefits

- Clean and governed Article Master
- 30% improvement in supply chain forecasting accuracy
- 33% redeployment of resources with MDG
- Significant increase in reporting accuracy
- Reduction of overall system maintenance with early defect identification
- Transparency on who has changed what, when and why
- Allow for the participation of external suppliers in the article creation process
